Introduction

The purpose of HMAA's Dental Procedure Guidelines is to provide a comprehensive outline to assist providers in benefit determination and claims processing requirements. This document is intended to be a guideline only. Benefits and frequency are determined by the member's individual plan; please refer to the member's Dental Certificate (DC) or Medical Description of Coverage (DOC) for details.

Legend

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC or DOC

The legend is printed on the bottom of each page of HMAA's Dental Procedure Guidelines is to assist providers in determining coverage for procedures. Please refer to the patient's plan benefits to determine specific percentages of coverage.

Definitions

When used in these Dental Procedure Guidelines:

- 1) **Alternate Benefit.** When an alternate method of treatment can be performed, the dental plan allows for the least costly method to be a benefit. Alternate Benefits are not designed to dictate dental care; the provider and patient should decide method of treatment. The Member is responsible for any additional charge up to provider's Usual Customary Rate (UCR). It is the provider's responsibility to inform the patient of any additional cost.
- 2) **Deny.** When a procedure is denied due to deductible, frequency limitation, annual maximum met or waiting period, the eligible fee may be collected from the patient.
- 3) **Disallowed.** When the fee for a procedure is disallowed, it is not payable by HMAA and cannot be collected from the patient.
- 4) **Not a benefit of the plan.** When the benefit guideline indicates procedure is not a benefit of the dental plan, provider may bill patient up to the UCR.
- 5) **Payable.** Services upon review are eligible for payment for only tooth #s and/or services listed.
- 6) **Submission Requirement.** Additional information that is required in order to make a benefit determination. If a procedure is submitted without the required information, it is disallowed and is not billable to patient.

Submission Requirements

The following defines each type of submission requirement.

- 1) **X-ray** submissions are required to be of diagnostic quality, dated, and identified. To ensure proper return, please indicate the provider's name and address on all submissions. Duplicate or X-ray "prints" are not routinely returned. If the provider requires X-ray duplicate or print to be returned, please indicate on submission. Intraoral photographic images are not accepted in lieu of X-rays; however, they may be sent in addition if X-ray does not clearly indicate area of concern.
- 2) **Narratives** should include a diagnosis and the treatment performed, unless specified otherwise in the Dental Procedure Guidelines. An operative report may be sent in lieu of a narrative; please see HMAA's definition of operative report.
- 3) **Periodontal charts** should indicate current 6-point pocket depth measurements on all teeth present.
- 4) **Medical carrier statements** apply to certain surgical procedures that may be a benefit under the patient's medical plan. Please submit an explanation of benefits from the patient's medical carrier, and HMAA dental will pay as a secondary benefit. If patient has HMAA medical, no additional benefit will be paid from the dental plan and no statement is required.
- 5) **Operative reports** should indicate diagnosis, site of procedure and treatment performed.

- 6) **Pathology report** is a copy of the report issued from pathology laboratory where specimen was submitted. Please submit **copy** only as it will not be returned.
- 7) **Tooth chart** identifies the patient's tooth. Missing teeth should be indicated in "Missing Teeth Information" section 34 of ADA dental claim form. For electronic or EDI submissions, missing teeth may be indicated in narrative form.

By Report Procedure

A "By Report" procedure code (DX999) may be used when the current CDT does not have a code that adequately describes procedure performed. Please include all supporting documentation (e.g. narrative, X-ray, description of procedure, chair-time) to determine appropriate benefit.

Additional Information

HMAA may request additional information to clarify a specific service. Providers are encouraged to submit any additional information to support a claim if required submission does not justify services rendered.

Predetermination

HMAA recommends the plan of treatment proposed be approved by HMAA before treatment begins; however, in cases of emergency or brief routine procedures in which the total fee does not exceed \$300, a treatment form need not be submitted before the dental services are performed. HMAA will respond to all pre-determination requests.

Predetermination provides an estimate of payment for the proposed treatment. Monies are **not** held in reserve. Predeterminations are valid for up to 3 months from the date of issue. When services have been rendered, return the document with the dates of service that reflect an actual completion date. Predeterminations do not serve as authorizations or guarantees of benefits because the patient's eligibility and coverage for the exact date of treatment are evaluated when the services are rendered.

Guidelines

Diagnostic

Clinical Oral Evaluations

The codes in this section have been revised to recognize the cognitive skills necessary for patient evaluation. The collection and recording of some data and components of the dental examination may be delegated; however, the evaluation, diagnosis and treatment planning are the responsibility of the dentist. As with all ADA procedure codes, there is no distinction made between the evaluations provided by general practitioners and specialists. Report additional diagnostic and/or definitive procedures separately.

General Guidelines

Multiple oral evaluations by the same dentist/dental office on the same day will be disallowed.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
<p>D0120</p> <ul style="list-style-type: none"> ● Periodic oral evaluation - established patient 	<p>An evaluation performed on a patient of record to determine any changes in the patient's dental and medical health status since a previous comprehensive or periodic evaluation. This includes an oral cancer evaluation and periodontal screening where indicated, and may require interpretation of information acquired through additional diagnostic procedures. Report additional diagnostic procedures separately.</p>	<p>This procedure is applied to the patient's annual exam benefit.</p>	
<p>D0140</p> <ul style="list-style-type: none"> ● Limited oral evaluation – problem focused 	<p>An evaluation limited to a specific oral health problem or complaint. This may require interpretation of information acquired through additional diagnostic procedures. Report additional diagnostic procedures separately. Definitive procedures may be required on the same date as the evaluation. Typically, patients receiving this type of evaluation present with a specific problem and/or dental emergencies, trauma, acute infections, etc.</p>	<p>This is a benefit once per patient per dentist, per 12-month period. If this limit is exceeded, the benefit will be denied and the patient is responsible for the eligible fee.</p>	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D0145	<ul style="list-style-type: none"> Oral evaluation for a patient under three years of age and counseling with primary care giver 	<p>This procedure is applied to the patient's annual exam benefit.</p>	
	<p>Diagnostic services performed for a child under the age of three, preferably within the first six months of the eruption of the first primary tooth, including recording the oral and physical health history, evaluation of caries susceptibility, development of an appropriate preventive oral health regimen and communication with and counseling of the child's parent, legal guardian and/or primary caregiver.</p>		
D0150	<ul style="list-style-type: none"> Comprehensive oral evaluation – new or established patient 	<ul style="list-style-type: none"> - This procedure is applied to the patient's annual exam benefit. - This procedure is a benefit once per 5 years per patient per dentist/dental office. If procedure is performed by the same dentist/dental office in less than 5 years, the alternate benefit of a Periodic Exam (D0120) is allowed. If the patient has not received any services for 3 years from the same office, a comprehensive evaluation may be a benefit. - Benefits for consultation, diagnosis and routine treatment planning are disallowed as components of the benefits for this evaluation by the same dentist/dental office. 	
	<p>Used by a general dentist and/or a specialist when evaluating a patient comprehensively. This applies to new patients; established patients who have had a significant change in health conditions or other unusual circumstances, by report, or established patients who have been absent from active treatment for three or more years. It is a thorough evaluation and recording of the extraoral and intraoral hard and soft tissues. It may require interpretation of information acquired through additional diagnostic procedures. Additional diagnostic procedures should be reported separately. This includes an evaluation for oral cancer where indicated, the evaluation and recording of the patient's dental and medical history and a general health assessment. It may include the evaluation and recording of dental caries, missing or unerupted teeth, restorations, existing prostheses, occlusal relationships, periodontal conditions (including periodontal screening and/or charting), hard and soft tissue anomalies, etc.</p>		
D0160	<ul style="list-style-type: none"> Detailed and extensive oral evaluation – problem focused, by report 	<p>The alternate benefit of D0140 is applied, refer to D0140 guidelines for benefit and time limitations.</p>	
	<p>A detailed and extensive problem focused evaluation entails extensive diagnostic and cognitive modalities based on the findings of a comprehensive oral evaluation. Integration of more extensive diagnostic modalities to develop a treatment plan for a specific problem is required. The condition requiring this type of evaluation should be described and documented. Examples of conditions requiring this type of evaluation may include dentofacial anomalies, complicated perio-prosthetic conditions, complex temporomandibular dysfunction, facial pain of unknown origin, conditions requiring multi-disciplinary consultation, etc.</p>		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D0170	<p>Re-evaluation - limited, problem focused (established patient; not post-operative visit)</p> <ul style="list-style-type: none"> Assessing the status of a previously existing condition. For example: <ul style="list-style-type: none"> - a traumatic injury where no treatment was rendered but patient needs follow-up monitoring; - evaluation for undiagnosed continuing pain; - soft tissue lesion requiring follow-up evaluation. 	<ul style="list-style-type: none"> - The alternate benefit of D0140 is applied, refer to D0140 guidelines for benefit and time limitations. - This procedure code is not to be used for a post-operative visit and for follow up to "nonsurgical" definitive care such as root canal treatment or seating of a crown. 	
D0180	<p>Comprehensive periodontal evaluation – new or established patient</p> <ul style="list-style-type: none"> This procedure is indicated for patients showing signs or symptoms of periodontal disease and for patients with risk factors such as smoking or diabetes. It includes evaluation of periodontal conditions, probing and charting, evaluation and recording of the patient's dental and medical history, oral cancer evaluation and general health assessment. It may include the evaluation and recording of dental caries, missing or unerupted teeth, restorations, occlusal relationships and oral cancer evaluation. 	<ul style="list-style-type: none"> - This procedure is applied to the patient's annual exam benefit. -This procedure is a benefit once per 5 years per patient per dentist/dental office. If procedure is performed by the same dentist/dental office in less than 5 years, the alternate benefit of a periodic exam (D0120) is allowed. If the patient has not received any services for 3 years from the same dentist/dental office, a comprehensive evaluation may be a benefit. -This procedure should be used primarily by a periodontist for a referred patient from a general dentist and should not be reported in addition to a D0150 by the same dentist/dental office in the same treatment series. - Benefits for consultation, diagnosis and routine treatment planning are disallowed as a component of the benefit for this evaluation by the same dentist/dental office. 	

Radiographs/Diagnostic Imaging (Including Interpretation)

Should be taken only for clinical reasons as determined by the patient's dentist. Should be of diagnostic quality and properly identified and dated. Is a part of the patient's clinical record and the original images should be retained by the dentist.

General Guidelines

Any combination of intraoral radiographs (periapical, occlusal, bitewing and/or panoramic films) taken by the same dentist/dental office on the same day with fees that equal or exceed fees for complete series will be processed as D0210. D0210 frequency limitations will be applied.

For oral surgeons, additional radiograph benefits may be allowed for diagnosis of specific condition or injury.

For endodontic treatment, one pre-operative radiograph is allowed. Working and post-operative radiographs are considered part of the complete procedure and disallowed.

Charges for duplication (copying of radiographs) is disallowed.

D0210	<p>Intraoral - complete series (including bitewings)</p> <ul style="list-style-type: none"> A radiographic survey of the whole mouth, usually consisting of 14-22 periapical and posterior bitewing images intended to display the crowns and roots of all teeth, periapical areas and alveolar bone. 	Refer to plan benefits for frequency limitations.	
-------	---	---	--

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D0220	Intraoral – periapical first film		
D0230	Intraoral – periapical each additional film		
D0240	Intraoral – occlusal film		
D0250	Extraoral – first film		
D0260	Extraoral – each additional film		
★			
D0270	Bitewing – single film	- Refer to plan benefits for frequency limitations.	
D0272	Bitewings – two films	- Each D0270, D0272, D0273, D0274, D0277 when performed, is applied to the patient's annual bitewing benefit.	
D0273	Bitewings – three films		
D0274	Bitewings – four films		
★			
D0277	Vertical bitewings – 7 to 8 films		
★	This does not constitute a full mouth intraoral radiographic series.		
D0290	Posterior – anterior or lateral skull and facial bone survey film		
■			
D0310	Sialography	Not a benefit of the plan	
D0320	Temporomandibular joint arthrogram, including injection	Not a benefit of the plan	
D0321	Other temporomandibular joint films, by report	Not a benefit of the plan	
D0330	Panoramic film	Refer to plan benefits for frequency limitations.	
●			
D0340	Cephalometric film	- Coverage for this procedure is limited to members who have Orthodontic Plan Benefits. - Benefits for cephalometric film performed with services other than orthodontic treatment are denied.	
■			
D0350	Oral/facial photographic images	- Coverage for this procedure is limited to members who have Orthodontic Plan Benefits. - Benefits for photographic images performed with services other than orthodontic treatment are denied. - Benefit is limited to once per Orthodontic case.	
■	This includes photographic images, including those obtained by intraoral and extraoral cameras, excluding radiographic images. These photographic images should be part of the patient's clinical record.		
D0360	Cone beam CT - craniofacial data capture	Not a benefit of the plan	
	Includes axial, coronal and sagittal data.		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D0362	Cone beam – two-dimensional image reconstruction using existing data, includes multiple images	Not a benefit of the plan	
D0363	Cone beam – three-dimensional image reconstruction using existing data, includes multiple images	Not a benefit of the plan	
D0411	HbA1c in-office point of service testing	Not a benefit of the plan	
D0412	Blood glucose level test – in office using a glucose meter.	Not a benefit of the plan	
D0415	Collection of microorganisms for culture and sensitivity	Not a benefit of the plan	
D0416	Viral culture A diagnostic test to identify viral organisms, most often herpes virus.	Not a benefit of the plan	
D0417	Collection and preparation of saliva sample for laboratory diagnostic testing	Not a benefit of the plan	
D0418	Analysis of saliva sample Chemical or biological analysis of saliva sample for diagnostic purposes.	Not a benefit of the plan	
D0421	Genetic test for susceptibility to oral diseases Sample collection for the purpose of certified laboratory analysis to detect specific genetic variations associated with increased susceptibility for oral diseases such as severe periodontal disease.	Not a benefit of the plan	
D0425	Caries susceptibility tests Not to be used for carious dentin staining	Not a benefit of the plan	
D0431	Adjunctive pre-diagnostic test that aids in detection of mucosal abnormalities including premalignant and malignant lesions, not to include cytology or biopsy procedures	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D0460	Pulp vitality tests ● Includes multiple teeth and contra lateral comparison(s), as indicated.	- Pulp tests are payable per visit not per tooth and only for the diagnosis of emergency conditions. - Benefits for this procedure are disallowed as part of any other definitive procedure on the same day, by the same dentist/dental office except D0140 limited oral evaluation-problem focused or D9110 palliative treatment.	
D0470	Diagnostic casts ■ Also known as diagnostic models or study models.	- Coverage for this procedure is limited to members who have Orthodontic Plan benefits. - Diagnostic casts are payable only once per case in conjunction with orthodontic services. - Additional casts taken by the same dentist/dental office during or after orthodontic treatment are included in the fee for orthodontics. - Diagnostic casts are included in the fee for restorations and prosthetic procedures.	

Oral Pathology Laboratory

These are procedures generally performed in a pathology laboratory and do not include the removal of the tissue sample from the patient. For removal of tissue sample, see codes D7285-D7288.

D0472	Accession of tissue, gross examination, preparation and transmission of written report	Benefits are limited to one D0472, D0473 or D0474 per site on the same date of service by the same dental office.	
D0473	Accession of tissue, gross and microscopic examination, preparation and transmission of written report		
D0474	Accession of tissue, gross and microscopic examination, including assessment of surgical margins for presence of disease, preparation and transmission of written report ● To be used in reporting architecturally intact tissue obtained by invasive means.		
D0475	Decalcification procedure Procedure in which hard tissue is processed in order to allow sectioning and subsequent microscopic examination.	Not a benefit of the plan	
D0476	Special stains for microorganisms Procedure in which additional stains are applied to biopsy or surgical specimen in order to identify microorganisms.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D0477	Special stains, not for microorganisms Procedure in which additional stains are applied to biopsy or surgical specimen in order to identify such things as melanin, mucin, iron, glycogen, etc.	Not a benefit of the plan	
D0478	Immunohistochemical stains A procedure in which specific antibody based reagents are applied to tissue samples in order to facilitate diagnosis.	Not a benefit of the plan	
D0479	Tissue in-situ hybridization, including interpretation A procedure which allows for the identification of nucleic acids, DNA and RNA, in the tissue sample in order to aid in the diagnosis of microorganisms and tumors.	Not a benefit of the plan	
D0480	● Accession of exfoliative cytologic smears, microscopic examination, preparation and transmission of written report To be used in reporting disaggregated, non-transepithelial cell cytology sample via mild scraping of the oral mucosa.		
D0481	Electron microscopy – diagnostic An extreme high magnification diagnostic procedure that enables identification of cell components and microorganisms that are otherwise not identifiable under light microscopy.	Not a benefit of the plan	
D0482	Direct immunofluorescence A technique used to identify immunoreactants which are localized to the patient's skin or mucous membranes.	Not a benefit of the plan	
D0483	Indirect immunofluorescence A technique used to identify circulating immunoreactants.	Not a benefit of the plan	
D0484	● Consultation on slides prepared elsewhere A service provided in which microscopic slides of a biopsy specimen prepared at another laboratory are evaluated to aid in the diagnosis of a difficult case or to offer a consultative opinion at the patient's request. The findings are delivered by written report.	This benefit is disallowed when billed in conjunction with an evaluation by the same dentist/dental office.	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D0485	<p>Consultation, including preparation of slides from biopsy material supplied by referring source</p> <ul style="list-style-type: none"> • <p>A service that requires the consulting pathologist to prepare the slides as well as render a written report. The slides are evaluated to aid in the diagnosis of a difficult case or to offer a consultative opinion at the patient's request.</p>	Upon review of the pathology report, the alternate benefit of a D0472, D0473, D0474 may be applied.	Pathology Report
D0486	<p>Laboratory accession of brush biopsy sample, microscopic examination, preparation and transmission of written report</p> <p>To be used in pathology laboratory reporting transepithelial, disaggregated cell samples by brush biopsy technique.</p>	Not a benefit of the plan	
D0502	<p>Other oral pathology procedures, by report</p>	Not a benefit of the plan	
D0999	<p>Unspecified diagnostic procedure, by report</p> <ul style="list-style-type: none"> • <p>Used for procedure that is not adequately described by a code. Describe procedure.</p>	Provide a complete description of services/treatment to allow determination of appropriate benefit allowance.	Narrative

Preventive

Dental Prophylaxis

D1110	<p>Prophylaxis – adult</p> <ul style="list-style-type: none"> ■ <p>Removal of plaque, calculus and stains from the tooth structures in the permanent and transitional dentition. It is intended to control local irritational factors.</p>	<ul style="list-style-type: none"> - A prophylaxis performed on the same date by the same dentist/dental office as a Periodontal Maintenance (D4910) or Scaling and Root Planing (D4341/D4342) is considered to be part of those procedures and the fee is disallowed. - A second prophylaxis treatment will be allowed as a special benefit under the following circumstances: <ul style="list-style-type: none"> ▪ The two prophylaxis treatments are conducted not more than 21 calendar days apart, and are not performed on the same day. ▪ The patient has not had a prophylaxis performed for at least 24 months. ▪ The patient must be 14 years or older. ▪ The patient has not had periodontal treatment for at least 36 months.

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D1120	Prophylaxis – child	This is a benefit through age 13.	
■	Removal of plaque, calculus and stains from the tooth structures in the primary and transitional dentition. It is intended to control local irritational factors.		

Topical Fluoride Treatment (Office Procedure)

Prescription strength fluoride product designed solely for use in the dental office, delivered to the dentition under the direct supervision of a dental professional. Fluoride must be applied separately from prophylaxis paste.

D1203	Topical application of fluoride – child	Allowed once per calendar year up to age 17.	
■			
D1204	Topical application of fluoride – adult	Not a benefit of the plan	
D1206	Topical fluoride varnish; therapeutic application for moderate to high caries risk patients	Examples of narratives for benefits of this procedure may include: high rate of decay, history of radiation therapy, root exposure, dry-mouth syndrome (xerostomia, Sjogren's Syndrome).	Narrative
■	Application of topical fluoride varnish, delivered in a single visit and involving the entire oral cavity. Not to be used for desensitization.		

Other Preventive Services

D1310	Nutritional counseling for control of dental disease	Not a benefit of the plan	
	Counseling on food selection and dietary habit as a part of treatment and control of periodontal disease and caries		
D1320	Tobacco counseling for the control and prevention or oral disease	Not a benefit of the plan	
	Tobacco prevention and cessation services reduce patient risks of developing tobacco-related oral disease and conditions and improves prognosis for certain dental therapies.		
D1330	Oral hygiene instructions	Not a benefit of the plan	
	This may include instructions for home care. Examples include tooth brushing technique, flossing, and use of special oral hygiene aids.		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D1351 ■	Sealant – per tooth Mechanically and/or chemically prepared enamel surface sealed to prevent decay.	- Subject to plan coverage. - Sealants are benefits once per tooth on the occlusal surface of all permanent bicuspid and molars. Valid Tooth #'s: 1-5, 12-21, 28-32	
D1510	Space maintainer – fixed, unilateral	- Allowed through age 17. - One replacement allowed per tooth. Tooth number/letter must be indicated.	
D1516	Space maintainer – fixed – bilateral, maxillary	Missing Teeth #'s: A-T, 2-15, 18-31	
D1517 ★	Space maintainer – fixed – bilateral, mandibular		
D1520	Space maintainer – removable – unilateral	Not a benefit of the plan	
D1526	Space maintainer – removable – bilateral, maxillary	- Allowed through age 17. - One replacement allowed per tooth. Tooth number/letter must be indicated.	
D1527 ★	Space maintainer – removable – bilateral, mandibular	Missing Teeth #'s: A-T, 2-15, 18-31	
D1550 ★	Re-cementation of space maintainer	Two re-cementations are allowed per tooth. Missing Teeth #'s: A-T, 2-15, 18-31	
D1555 ★	Removal of fixed space maintainer Procedure delivered by dentist who did not originally place the appliance, or by the practice where the appliance was originally delivered to the patient.	Benefits for removal of fixed space maintainer by the same dentist/dental office who placed the appliance are disallowed. D1555 is disallowed when submitted with re-cementation.	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC/DOC

Routine Restorative

Local anesthesia is usually considered to be part of Restorative procedures.

A one-surface posterior restoration is one in which the restoration involves only one of the five surface classifications (mesial, distal, occlusal, lingual, or facial, including buccal and labial).

A two-surface posterior restoration is one in which the restoration extends to two of the five surface classifications.

A three-surface posterior restoration is one in which the restoration extends to three of the five surface classifications.

A four-or-more surface posterior restoration is one in which the restoration extends to four or more of the five surface classifications.

A one-surface anterior proximal restoration is one in which neither the lingual nor facial margins of the restoration extend beyond the line angle.

A two-surface anterior proximal restoration is one in which either the lingual or facial margin of the restoration extends beyond the line angle.

A three-surface anterior proximal restoration is one in which both the lingual and facial margins of the restorations extend beyond the line.

A four-or-more surface anterior restoration is one in which both the lingual and facial margins extend beyond the line angle and the incisal angle is involved. This restoration might also involve all four surfaces of an anterior tooth and not involve the incisal angle.

General Guidelines

HMAA plans provide for restoration of tooth structure loss from caries. Restorations provided for cosmetic purposes are non-payable by HMAA. Patient must be informed and agree to assume the cost of non-benefit procedures.

Identify the tooth surface(s) on the claim submission. Please use the following abbreviations: D – distal· F – facial (labial or buccal)· I – incisal· L – lingual· M – mesial· O – occlusal.

Amalgam Restoration (Including Polishing)

Tooth preparation, all adhesives (including amalgam bonding agents), liners and bases are included as part of the restoration. If pins are used, they should be reported separately (see D2951).

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D2140	Amalgam – one surface, primary or permanent		
D2150	Amalgam – two surfaces, primary or permanent		
D2160	Amalgam – three surfaces, primary or permanent		
D2161 ▲	Amalgam – four or more surfaces, primary or permanent		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

Resin-Based Composite Restorations

Resin-based composite refers to a broad category of materials including but not limited to composites. May include bonded composite, light-cured composite, etc. Tooth preparation, acid etching, adhesives (including resin bonding agents), liners and bases and curing are included as part of the restoration. Glass ionomers, when used as restorations, should be reported with these codes. If pins are used, they should be reported separately (see D2951).

General Guidelines

Composite restorations in posterior teeth, except for the facial composite on bicuspid, are not a benefit. HMAA will allow the alternate benefit of an amalgam restoration if performed on posterior teeth. The patient should be informed that they are responsible for the cost difference if they elect to have the composite restoration done on a posterior tooth.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D2330	Resin-based composite – one surface, anterior	Valid Tooth #'s: 6-11, 22-27, C-H, M-R	
D2331	Resin-based composite – two surfaces, anterior		
D2332	Resin-based composite – three surfaces, anterior		
D2335 ▲	Resin-based composite – four or more surfaces or involving incisal angle (anterior) Incisal angle to be defined as one of the angles formed by the junction of the incisal and the mesial or distal surface of an anterior tooth.		
D2390 ▲	Resin-based composite crown, anterior Full resin-based composite coverage of tooth.	- If D2390 is performed by the same dentist/dental office within 6 months of routine restoration, the routine restoration will be deducted from the approved amount of the D2390. - A D2390 crown placed within 24 months of a routine restorative crown (D2390, D2930, D2932, D2933, D2934) is disallowed by same dentist/dental office and denied by different dentist/dental office Valid Tooth #'s: 6-11, 22-27, C-H, M-R	X-ray
D2391 ▲	Resin-based composite –one surface, posterior Used to restore a carious lesion into the dentin or a deeply eroded area into the dentin. Not a preventive procedure.	Only facial (buccal) surface on bicuspid are a benefit of the plan. Valid Tooth #'s: 4, 5, 12, 13, 20, 21, 28, 29 Surface: F (facial/buccal) Tooth #'s: 4, 5, 12, 13, 20, 21, 28, 29 Surfaces: M, O, D, L, and 1-3, 14-19, 30-32 (any surface) will be processed as an alternate benefit with amalgam equivalent.	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D2392	Resin-based composite – two surfaces, posterior	Valid Tooth #'s: 1-5, 12-21, 28-32	
D2393	Resin-based composite – three surfaces, posterior		
D2394 ▲	Resin-based composite – four or more surfaces, posterior		
D2410	Gold foil – one surface	The alternate benefit of a posterior amalgam or anterior composite restoration will be applied.	
D2420	Gold foil – two surfaces		
D2430 ▲	Gold foil – three surfaces		

Inlay/Onlay Restorations

Definitions (Source: CDT 2009/2010, ADA):

Inlay – a restoration that restores one or more cusps and adjoining occlusal surfaces of the entire occlusal surface and is retained by mechanical or adhesive means.

Inlay – a fixed intracoronal restoration; a dental restoration made outside the oral cavity to correspond to the form of the prepared cavity, which is then luted in to the tooth.

General Guidelines

Inlays or Onlays are not a benefit for children under 12 years of age.

The inlay/onlay is a covered benefit only when required for restorative reasons (decay or fracture) and only when the tooth cannot be restored with a more conservative method. When an inlay or onlay is submitted and the tooth can be restored with filling material, the alternate benefit of a routine restoration will be applied.

Multistage procedures are reported and are a benefit upon completion. The completion of onlays and inlays is the cementation date.

Replacement of inlays and onlays may be a benefit for restorations older than 5 years in the presence of fracture, decay or the tooth is otherwise compromised.

D2510	Inlay – metallic – one surface		
D2520	Inlay – metallic – two surfaces		
D2530 ◆	Inlay – metallic – three or more surfaces		
D2542	Onlay – metallic – two surfaces	Upon review of X-ray, the alternate benefit of posterior amalgam or anterior composite will be applied if Onlay criteria not met.	X-ray
D2543	Onlay – metallic – three surfaces		
D2544 ◆	Onlay – metallic – four or more surfaces		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

Crowns – Single Restoration Only

Classification of Metals (Source: ADA Council on Scientific Affairs)

The noble metal classification system has been adopted as a more precise method of reporting various alloys used in dentistry. The alloys are defined on the basis of the percentage of metal content:

high noble - Gold (Au), Palladium (Pd), and/or Platinum (Pt) > 60% (with at least 40% Au); titanium and titanium alloys – Titanium (Ti) > 85%; noble - Gold (Au), Palladium (Pd), and/or Platinum (Pt) > 25%; predominantly base - Gold (Au), Palladium (Pd), and/or Platinum (Pt) < 25%.

Porcelain/Ceramic

Refers to those non-metal, non-resin inorganic refractory compounds processed at high temperatures (600°C/1112°F and above) and pressed, polished or milled – including porcelains, glasses and glass-ceramics.

Resin:

Refers to any resin-based composite, including fiber or ceramic reinforced polymer compounds.

General Guidelines

Porcelain crowns, porcelain-fused to metal or plastic processed to metal type crowns, inlays or onlays are not a benefit for children under 12 years of age.

The fee for a restoration includes services such as, but not limited to, crown removal, tooth preparation, diagnostic wax-up, electro surgery, temporary restorations, cement bases, impressions, laboratory fees, Laser technology, occlusal adjustment within 6 months after the restoration, post-operative visits, local anesthesia, crown lengthening and gingivectomy on the same date of service. These procedures are disallowed when submitted as a separate charge.

A crown (resin, porcelain or metal) is a covered benefit only when required for restorative reasons (decay and fracture) and only when the tooth cannot be restored with a more conservative method. If the tooth can be restored with filling material, the patient must be informed that the crown or cast restoration is an elective procedure. Restorations provided for cosmetic purposes are considered elective services. Patient must be informed and agree to assume the cost of non-benefit procedures. It is recommended that the dentist obtain the patient's written consent on a form that clearly explains the charges that will be incurred.

When a crown is planned for replacement and the x-ray or other submitted attachments do not indicate decay, fracture and or the tooth being otherwise compromised, the provider is requested to provide a narrative to state the reason(s) for replacement. Replacement of cosmetic veneers is denied.

If HMAA has history of endodontic treatment, an X-ray is not required for crowns, buildup or post and core.

Multistage procedures are reported and are a benefit upon completion. The completion date for crowns and veneers is the cementation date. Indicate the cementation date of the crown when submitting for payment. For patients whose dental coverage has been terminated; indicate the preparation date in a narrative. If the preparation was done prior to the patient's termination date, the crown will be a benefit if cemented within 30 days of termination.

Porcelain crowns, porcelain-fused to metal, resin-based or plastic processed to metal type crowns placed posterior to the 2nd bicuspid will be processed as the alternate benefit of the metallic equivalent.

Replacement of gold restorations, veneers, porcelain and composite/resin crowns due to defective marginal integrity, recurrent decay, fracture of tooth structure, or non-repairable fracture of the restoration may be a benefit if older than 5 years.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D2710 ◆	Crown – resin-based composite (indirect) Unfilled or non-reinforced resin crowns should be reported using D2999.	Payable for tooth #'s: 4-13, 20-29 Tooth #'s 1-3, 14-19, 30-32 will be processed as alternate benefit with metallic equivalent.	X-ray
D2712 ◆	Crown – 3/4 resin based composite (indirect) This code does not include facial veneers.	Payable for tooth #'s: 4-13, 20-29 Tooth #'s 1-3, 14-19, 30-32 will be processed as alternate benefit with metallic equivalent.	X-ray

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D2799 ▲	Provisional crown Crown utilized as an interim restoration of at least six months duration during restorative treatment to allow adequate time for healing or completion of other procedures. This includes, but is not limited to changing vertical dimension, completing periodontal therapy or cracked-tooth syndrome. This is not to be used as a temporary crown for a routine prosthetic restoration.	Covered as a benefit only in the event of an injury. Narrative must detail the scope of injury.	X-ray Narrative
D2910	Recement inlay, onlay, or partial coverage restoration	- Benefit for recementation within 6 months of the initial placement is disallowed when performed by the same dentist or dental office.	
D2915	Recement cast or prefabricated post and core	- Recementation by a different provider (within 6 months of initial placement) is a benefit once.	
D2920 ▲	Recement crown	- Benefits are allowed for one recementation after 6 months have elapsed since initial placement. Subsequent requests for recementation are allowed every 12 months thereafter. - D2920 and D2915 are not benefits on the same tooth on the same service date by the same dentist office. If submitted, D2915 will be disallowed.	
D2930 ▲	Prefabricated stainless steel crown – primary tooth	- D2930 performed by same dentist/dental office within 6 months of routine restoration, the routine restoration will be deducted from the approved amount of the D2930. - D2930 placed within 24 months of a routine restorative crown (D2390, D2930, D2932, D2933, D2934) is disallowed by same dentist/dental office and denied by different dentist/dental office.	
D2931 ▲	Prefabricated stainless steel crown – permanent tooth	- D2931 performed by same dentist/dental office within 6 months of routine restoration, the routine restoration will be deducted from the approved amount of the D2391. - D2931 placed within 24 months of a routine restorative crown (D2390, D2930, D2932, D2933, D2934) is disallowed by same dentist/dental office and denied by different dentist/dental office.	
D2932 ▲	Prefabricated resin crown	- D2392 performed by same dentist/dental office within 6 months of routine restoration, the routine restoration will be deducted from the approved amount of the D2392. - D2392 placed within 24 months of a routine restorative crown (D2390, D2930, D2932, D2933, D2934) is disallowed by same dentist/dental office and denied by different dentist/dental office. - When submitted for a posterior primary tooth or permanent tooth, the alternate benefit allowance of D2930 or D2931 is applied.	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D2933 ▲	Prefabricated stainless steel crown with resin window Open-face stainless steel crown with aesthetic resin facing or veneer.	<ul style="list-style-type: none"> - D2933 performed by same dentist/dental office within 6 months of routine restoration, the routine restoration will be deducted from the approved amount of the D2393. - D2933 placed within 24 months of a routine restorative crown (D2390, D2930, D2932, D2933, D2934) is disallowed by same dentist/dental office and denied by different dentist/dental office. - When submitted for a posterior primary tooth or a permanent tooth, the alternate benefit D2930 or D2931 is applied. 	
D2934 ▲	Prefabricated esthetic coated stainless steel crown – primary tooth	<ul style="list-style-type: none"> - D2934 performed by same dentist/dental office within 6 months of routine restoration, the routine restoration will be deducted from the approved amount of the D2934. - D2934 placed within 24 months of a routine restorative crown (D2390, D2930, D2932, D2933, D2934) is disallowed by same dentist/dental office and denied by different dentist/dental office. - When submitted for a posterior primary tooth, the alternate benefit of D2930 is applied. 	
D2940 ▲	Sedative filling Temporary restoration intended to relieve pain. Not to be used as a base or liner under a restoration.	<ul style="list-style-type: none"> - Sedative fillings are covered benefits for emergency relief of pain. - Allowed once per tooth per provider per 24 months. - Benefits for a sedative filling are disallowed when performed in conjunction with a definitive service and/or Palliative treatment (D9110.) 	
D2950 ▲	Core buildup, including any pins Refers to building up of anatomical crown when restorative crown will be placed, whether or not pins are used. A material is placed in the tooth preparation for a crown when there is insufficient tooth strength and retention for the crown procedure. This should not be reported when the procedure only involves a filler to eliminate any undercut, box form, or concave irregularity in the preparation.	<ul style="list-style-type: none"> - Core buildups are a benefit only when the tooth being crowned is damaged (over 50% of remaining tooth structure) that there is insufficient tooth structure to support a restorative crown. - Core buildups are disallowed when performed in conjunction with inlay and onlay procedures. - Core buildups are disallowed when radiographs indicate sufficient tooth structure (over 50%) remains to support a crown. - If HMAA has history of endodontic treatment, an X-ray is not required 	X-ray
D2951 ▲	Pin retention – per tooth, in addition to restoration	<ul style="list-style-type: none"> - Only allowed for amalgam and composite restorations. A fee for pin retention when billed in conjunction with a buildup is disallowed. - Pin retention is a benefit once per tooth. Fees for additional pins on the same tooth are disallowed. 	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

D2980	Crown repair, by report Includes removal of crown, if necessary.	<ul style="list-style-type: none"> - Repairs for porcelain on molars are not a benefit. The patient is responsible for the cost. - Repair is a benefit 6 months after cementation and thereafter a benefit once every 12 months - Documentation may include materials used, tooth number, arch, quadrant, or area of the mouth, chair time, X-rays or any other supporting information. - Upon review of documentation, the appropriate benefit allowance will be applied. 	Narrative
D2999	Unspecified restorative procedure, by report Use for procedure that is not adequately described by a code. Describe procedure.	<ul style="list-style-type: none"> - Documentation may include materials used, tooth number, chair time, X-rays or any other supporting information. - Upon review of documentation, the appropriate benefit allowance will be applied. - The additional lab cost for porcelain gingival margin on anterior and bicuspid crowns may be charged to the patient, submit as code D2999 (Unspecified restorative procedure, by report code) describing the service, including a narrative stating, "service elected by patient for cosmetic reasons". 	Narrative

Endodontics

Local anesthesia is usually considered to be part of Endodontic procedures.

D3110 ▲	Pulp cap – direct (excluding final restoration) Procedure in which the exposed pulp is covered with a dressing or cement that protects the pulp and promotes healing and repair.	Separate benefits for pulp caps by the same dentist/dental office are disallowed as components of a sedative filling.	
D3120 ▲	Pulp cap – indirect (excluding final restoration) Procedure in which the nearly exposed pulp is covered with a protective dressing to protect the pulp from additional injury and to promote healing and repair via formation of secondary dentin.	Separate benefits for pulp caps by the same dentist/dental office are disallowed as components of a sedative filling.	
D3220 ▲	Therapeutic pulpotomy (excluding final restoration) – removal of pulp coronal to the dentinocemental junction and application of medicament Pulpotomy is the surgical removal of a portion of the pulp with the aim of maintaining the vitality of the remaining portion by means of an adequate dressing. - To be performed on primary or permanent teeth. - This is not to be construed as the first stage of root canal therapy. - Not to be used for Apexogenesis.	<ul style="list-style-type: none"> - Therapeutic pulpotomy is only a benefit when performed on primary teeth. The fee for a pulpotomy performed on a permanent tooth is denied and the approved amount is collectable from the patient. - This benefit is allowed once per tooth per lifetime. 	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D3221 ▲	Pulpal debridement, primary and permanent teeth Pulpal debridement for the relief of acute pain prior to conventional root canal therapy. This procedure is not to be used when endodontic treatment is completed on the same day.	- The benefit for D3221 is disallowed on the same day as D3220 or root canal therapy - This benefit is allowed once per tooth per lifetime.	
D3222 ▲	Partial pulpotomy for apexogenesis - permanent tooth with incomplete root development Removal of a portion of the pulp and application of a medicament with the aim of maintaining the vitality of the remaining portion to encourage continued physiological development and formation of the root. This procedure is not to be construed as the first stage of root canal therapy.	The benefit for partial pulpotomy is disallowed when performed in conjunction with root canal therapy or procedures D3351-D3353 on the same tooth by the same dentist/dental office.	

Endodontic Therapy on Primary Teeth

Endodontic therapy on primary teeth with succedaneous teeth and placement of resorbable filling. This includes pulpectomy, cleaning, and filling of canals with resorbable material.

D3230 ▲	Pulpal therapy (resorbable filling) - anterior, primary tooth (excluding final restoration) Primary incisors and cuspids.	- Pulpal therapy is only a benefit when performed on a non-vital primary tooth that has a successor. - For a non-vital primary tooth with no successor, benefit is limited to a D3310 (anterior) root canal. - For a vital primary tooth, benefit is limited to a D3220 (therapeutic pulpotomy).	X-ray
D3240 ▲	Pulpal therapy (resorbable filling) - posterior, primary tooth (excluding final restoration) Primary first and second molars.	- Pulpal therapy is only a benefit when performed on a non-vital primary tooth that has a successor. - For a non-vital primary tooth with no successor, benefit is limited to a D3320 (bicuspid) root canal. - For a vital primary tooth, benefit is limited to a D3220 (therapeutic pulpotomy).	X-ray

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

Endodontic Therapy (Including Treatment Plan, Clinical Procedures and Follow-Up Care)

Includes primary teeth without succedaneous teeth and permanent teeth. Complete root canal therapy; pulpectomy is part of root canal therapy.

Includes all appointments necessary to complete treatment; also includes intra-operative radiographs. Does not include diagnostic evaluation and necessary radiographs/diagnostic images.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D3310	Endodontic therapy, anterior tooth (excluding final restoration)	<ul style="list-style-type: none"> - For a root canal completed and filled with biologically acceptable material on a retained primary tooth with no permanent successor, include a narrative stating that there is no permanent successor. - A separate fee for palliative treatment is disallowed when performed on the same date of service as root canal therapy by the same dentist/dental office. 	
D3320	Endodontic therapy, bicuspid tooth (excluding final restoration)		
D3330 ▲	Endodontic therapy, molar tooth (excluding final restoration)		
D3331 ▲	Treatment of root canal obstruction; non-surgical access In lieu of surgery, for the formation of a pathway to achieve an apical seal without surgical intervention because of a non-negotiable root canal blocked by foreign bodies, including but not limited to separated instruments, broken posts or calcification of 50% or more of the length of the tooth root.	Post removal is not included in this procedure.	
D3332 ▲	Incomplete endodontic therapy; inoperable, unrestorable or fractured tooth Considerable time is necessary to determine diagnosis and/or provide initial treatment before the fracture makes the tooth unretainable.	<ul style="list-style-type: none"> - Subsequent endodontic therapy is disallowed when performed by the same dentist/dental office. - Payment is limited to once per tooth. 	Narrative
D3333 ▲	Internal root repair of perforation defects Non-surgical seal of perforation caused by resorption and/or decay but not iatrogenic by provider filing claim.	<ul style="list-style-type: none"> - This procedure is only a benefit on permanent teeth with incomplete root development or for repair of a perforation. - This procedure is disallowed on the same day as an apicoectomy (D3410, D3421, D3425, D3426) or retrograde filling (D3430) by the same dentist/dental office. Apicoectomy/Periradicular Services

Periradicular surgery is a term used to describe surgery to the root surface (e.g., apicoectomy), repair of a root perforation or resorptive defect, exploratory curettage to look for root fractures, removal of extruded filling materials or instruments, removal of broken root fragments, sealing of accessory canals, etc. This does not include retrograde filling material placement.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D3410 ▲	Apicoectomy/periradicular surgery – anterior For surgery on root of anterior tooth. Does not include placement of retrograde filling material.	- The benefit for a biopsy of oral tissue is disallowed as included in the fee for a surgical procedure (e.g. apicoectomy) when performed in the same location and on the same date of service by the same dentist/dental office. - Retreatment of apicoectomies/periradicular surgery is disallowed within 24 months of the initial treatment by the same dentist/dental office.	Post-op X-ray
D3421 ▲	Apicoectomy/periradicular surgery – bicuspid (first root) For surgery on one root of a bicuspid. Does not include placement of retrograde filling material. If more than one root is treated, see D3426.	- The benefit for a biopsy of oral tissue is disallowed as included in the fee for a surgical procedure (e.g. apicoectomy) when performed in the same location and on the same date of service by the same dentist/dental office. -Retreatment of apicoectomies/periradicular surgery is disallowed within 24 months of the initial treatment by the same dentist/dental office.	Post-op X-ray
D3425 ▲	Apicoectomy/periradicular surgery – molar (first root) For surgery on one root of a molar tooth. Does not include placement of retrograde filling material. If more than one root is treated, see D3426.	- The benefit for a biopsy of oral tissue is disallowed as included in the fee for a surgical procedure (e.g. apicoectomy) when performed in the same location and on the same date of service by the same dentist/dental office. - Retreatment of apicoectomies/periradicular surgery is disallowed within 24 months of the initial treatment by the same dentist/dental office.	Post-op X-ray
D3426 ▲	Apicoectomy/periradicular surgery (each additional root) Typically used for bicuspid and molar surgeries when more than one root is treated during the same procedure. This does not include retrograde filling material placement.	- The benefit for a biopsy of oral tissue is disallowed as included in the fee for a surgical procedure (e.g. apicoectomy) when performed in the same location and on the same date of service by the same dentist/dental office. - Retreatment of apicoectomies/periradicular surgery is disallowed within 24 months of the initial treatment by the same dentist/dental office.	Post-op X-ray

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D3430 ▲	Retrograde filling – per root For placement of retrograde filling material during periradicular surgery procedures. If more than one filling is placed in one root - report as D3999 and describe.	- Retrograde filling includes all retrograde procedures per root. - Service is limited to once per 24 months.	Post-op X-ray
D3450 ▲	Root amputation – per root Root resection of a multi-rooted tooth while leaving the crown. If the crown is sectioned, see D3920.		Pre-op X-ray
D3460	Endodontic endosseous implant Placement of implant material, which extends from a pulpal space into the bone beyond the end of the root.	Not a benefit of the plan	
D3470	Intentional reimplantation (including necessary splinting) For the intentional removal, inspection and treatment of the root and replacement of a tooth into its own socket. This does not include necessary retrograde filling material placement.	Not a benefit of the plan	
D3910	Surgical procedure for isolation of tooth with rubber dam	Not a benefit of the plan	
D3920 ▲	Hemisection (including any root removal), not including root canal therapy Includes separation of a multi-rooted tooth into separate sections containing the root and the overlying portion of the crown. It may also include the removal of one or more of those sections.	No benefit is allowed for the replacement of the missing portion of existing tooth.	Pre-op X-ray
D3950 ▲	Canal preparation and fitting of preformed dowel or post Should not be reported in conjunction with D2952, D2953, D2954 or D2957 by the same practitioner	Not a benefit of the plan	
D3999 ▲	Unspecified endodontic procedure, by report Used for procedure that is not adequately described by a code. Describe procedure.	- Provide a complete description of services and treatment including tooth number. - Documentation may include materials used, tooth number, chair time, X-rays or any other supporting information. - Upon review the appropriate benefit allowance will be applied.	Narrative

Periodontics

Local anesthesia is usually considered to be part of Periodontal procedures.

Surgical Services (Including Usual Post-operative Care)

Site: A term used to describe a single area, position, or locus. The word "site" is frequently used to indicate an area of soft tissue recession on a single tooth or an osseous defect adjacent to a single tooth; also used to indicate soft tissue defects and/or osseous defects in edentulous tooth positions.

- If two contiguous teeth have areas of soft tissue recession, each area of recession is a single site.
- If two contiguous teeth have adjacent but separate osseous defects, each defect is a single site.
- If two contiguous teeth have a communicating interproximal osseous defect, it should be considered a single site.
- All non-communicating osseous defects are single sites.
- All edentulous non-contiguous tooth positions are single sites.
- Depending on the dimensions of the defect, up to two contiguous edentulous tooth positions may be considered a single site.

Tooth Bonded Space: A space created by one or more missing teeth that has a tooth on each side.

General Guidelines

Periodontal surgical procedures include all necessary post-operative care, finishing procedures, evaluations (D9430, D9110, D0140) for three months as well as any surgical re-entry (except soft tissue grafts) for three years. When a surgical procedure is billed in the same site within three months of the initial procedure, a separate benefit for the surgery is disallowed.

Periodontal services are only a benefit when performed on natural teeth for treatment of periodontal disease. Benefits for these procedures when billed in conjunction with implants, ridge augmentation, extraction sites and/or periradicular surgery are denied and collectable from the patient.

Prophylaxis is not payable as a separate benefit when provided on the same date as periodontal scaling and root planing, or periodontal maintenance.

Once the quadrant fee is paid within the service time limitation, subsequent episodes of same procedure will be disallowed for the same dentist/dental office and denied for a different dentist/dental office. If extraordinary circumstances are present and documented on submission, the benefits will be denied and are the patient's responsibility up to the approved amount for the surgery.

When two or more different 1-3 teeth services are performed in the same quadrant on the same service date, payment of the 1-3 teeth procedures will be made, not to exceed the quadrant fee of the highest service performed.

If periodontal surgery is performed in less than four weeks after scaling and root planing, the benefit for scaling and root planing will be deducted from the surgery.

The benefits for biopsy (D7285, D7286) frenulectomy (D7960) and excision of hard and soft tissue lesions (D7410, D7411, D7450, D7451) are disallowed when the procedures are performed on the same date, same surgical site/area by the same dentist/dental office as the codes D4210 – D4275.

Laser technology is considered a component of the primary procedure and will be disallowed.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D4210	Gingivectomy or gingivoplasty – four or more contiguous teeth or tooth bounded spaces per quadrant	- Procedure is a benefit if the pocket depth is greater than or equal to 5 mm. - A separate benefit for gingivectomy or gingivoplasty-per tooth is disallowed when performed in conjunction with the preparation of a crown or other restoration by the same dentist/dental office. A separate benefit for D4210/4211 will be denied if performed for 'cosmetic reasons'.	Perio Chart
D4211 ▲	Gingivectomy or gingivoplasty - one to three contiguous teeth or tooth bounded spaces per quadrant Involves the excision of the soft tissue wall of the periodontal pocket by either an external or an internal bevel. It is performed to eliminate suprabony pockets after adequate initial preparation, to allow access for restorative dentistry in the presence of suprabony pockets, or to restore normal architecture when gingival enlargements or asymmetrical or unaesthetic topography is evident with normal bony configuration.	- Bounded tooth spaces are not counted as the procedure does not require a flap extension. - For D4211, if more than one tooth, indicate additional teeth numbers in narrative. - Gingivectomies, osseous or mucogingival surgery and free soft tissue grafts are covered benefits once every three years.	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ♦ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D4212 ▲	Gingivectomy or gingivoplasty to allow access for restorative procedure per tooth		
D4230	Anatomical crown exposure – four or more contiguous teeth or bounded tooth spaces per quadrant. This procedure is utilized in an otherwise periodontally healthy are to remove enlarged gingival tissue and supporting bone (ostectomy) to provide an anatomically correct gingival relationship. Anatomical crown exposure – one to three teeth or bounded tooth spaces per quadrant.		Perio Chart
D4231	This procedure is utilized in an otherwise periodontally healthy are to remove enlarged gingival tissue and supporting bone (ostectomy) to provide an anatomically correct gingival relationship.		
D4240	Gingival flap procedure, including root planing – four or more contiguous teeth or tooth bounded spaces per quadrant	- Procedure is a benefit if the pocket is greater than or equal to 5 mm. - Procedure D4240 includes root planing (D4341/4342) and the benefit for root planing will be disallowed when performed in conjunction with D4240/4241.	Perio Chart
D4241 ▲	Gingival flap procedure, including root planing - one to three contiguous teeth or tooth bounded spaces per quadrant A soft tissue flap is reflected or resected to allow debridement of the root surface and the removal of granulation tissue. Osseous recontouring is not accomplished in conjunction with this procedure. May include open flap curettage, reverse bevel flap surgery, modified Kirkland flap procedure, and modified Widman surgery. This procedure is performed in the presence of moderate to deep probing depths, loss of attachment, need to maintain esthetics, need for increased access to the root surface and alveolar bone, or to determine the presence of a cracked tooth, fractured root, or external root resorption. Other procedures may be required concurrent to D4240 and should be reported separately using their own unique codes.	- For D4241, if more than one tooth, indicate additional teeth numbers in narrative. - Procedure is a benefit once every three years.	
D4245	Apically positioned flap Procedure is used to preserve keratinized gingiva in conjunction with osseous resection and second stage implant procedure. Procedure may also be used to preserve keratinized/attached gingiva during surgical exposure of labially impacted teeth, and may be used during treatment of peri-implantitis.		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major □ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D4249 ▲	Clinical crown lengthening – hard tissue This procedure is employed to allow restorative procedure or crown with little or no tooth structure exposed to the oral cavity. Crown lengthening requires reflection of a flap and is performed in a healthy periodontal environment, as opposed to osseous surgery, which is performed in the presence of periodontal disease. Where there are adjacent teeth, the flap design may involve a larger surgical area.	<ul style="list-style-type: none"> - Crown lengthening is applied only when bone is removed and sufficient time is allowed for healing. - Benefits for crown lengthening are disallowed when performed on the same day as crown preparations or restorations. - A separate fee for crown lengthening is disallowed when performed in conjunction with osseous surgery on the same teeth. - If more than one tooth, indicate teeth numbers in the narrative. - The fee for multiple crown lengthening sites within a single quadrant will not exceed the benefit for D4260. 	X-ray
D4260	Osseous surgery (including flap entry and closure) – four or more contiguous teeth or tooth bounded spaces per quadrant	<ul style="list-style-type: none"> - The fee for osseous surgery includes: <ul style="list-style-type: none"> ▪ Osseous contouring ▪ Distal or proximal wedge surgery ▪ Scaling and root planing (D4341, D4342) ▪ Gingivectomy (D4210, D4211) ▪ Flap procedures (D4240, D4241) 	Perio Chart
D4261 ▲	Osseous surgery (including flap entry and closure) - one to three contiguous teeth or tooth bounded spaces per quadrant This procedure modifies the bony support of the teeth by reshaping the alveolar process to achieve a more physiologic form. This may include the removal of supporting bone (ostectomy) and/or non-supporting bone (osteoplasty). Other procedures may be required concurrent to D4260, D4261 and should be reported using their own unique codes.	<ul style="list-style-type: none"> - This procedure is a benefit if the pocket depth is greater than or equal to 5 mm. - Usually only two full quadrants of osseous surgery are allowed on the same date of service. Benefits in excess of two osseous surgeries on the same date of service are denied unless a narrative is supplied to explain exceptional circumstances. - If periodontal surgery is performed less than four weeks after scaling and root planing, the benefit for the scaling and root planing will be deducted from the surgery. - For one to three teeth, when subsequent treatment of the same procedure is required within the same quadrant, the total benefit is limited to the allowance of the quadrant fee. - For D4261, if more than one tooth, indicate teeth numbers in narrative. - Osseous surgery is a benefit on the same tooth once every 3 years. - The following procedures may be a benefit separately on the same day: <ul style="list-style-type: none"> ▪ Osseous grafts (D4263, D4264) ▪ Exotosis removal (D7471) ▪ Hemisection (D3920) ▪ Extraction (D7140) ▪ Apicoectomy (D3410) ▪ Root Amputations (D3450) ▪ Guided Tissue Regeneration (D4266) ▪ Soft tissue grafts (D4271) 	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D4263	Bone replacement graft - first site in quadrant		Perio Chart
D4264 ▲	Bone replacement graft – each additional site in quadrant This procedure involves the use of osseous autografts, osseous allografts, or non-osseous grafts to stimulate periodontal regeneration when the disease process has led to a deformity of the bone. This procedure does not include flap entry and closure, wound debridement, osseous contouring, or the placement of biologic materials to aid in osseous tissue regeneration or barrier membranes. Other separate procedures may be required concurrent to D4263 and should be reported using their own unique codes. Definition for the term "site" precedes code D4210.	<ul style="list-style-type: none"> - This procedure is a benefit if the pocket depth is greater than or equal to 5 mm. Benefits for bone grafting are available only when billed for natural teeth and performed for periodontal purposes. - The benefit for bone grafting is denied as a specialized or elective technique when billed in conjunction with implants, ridge augmentation, extraction sites, periradicular surgery, etc. – refer to D7950, D7951 and D7953. - This procedure must be submitted with a gingival flap (D4240/D4241) or osseous surgery (D4260/D4261) entry procedure. - Maximum benefit for bone replacement grafts is two sites per quadrant. Bone graft for the second site in the same quadrant will be processed as D4264. 	
D4265 ▲	Biologic materials to aid in soft and osseous tissue regeneration Biologic materials may be used alone or with other regenerative substrates such as bone and barrier membranes, depending upon their formulation and the presentation of the periodontal defect. This procedure does not include surgical entry and closure, wound debridement, osseous contouring, or the placement of graft materials and/or barrier membranes. Other separate procedures may be required concurrent to D4265 and should be reported using their own unique codes.	<ul style="list-style-type: none"> - Benefits are available only when billed for natural teeth. Benefits are denied when billed in conjunction with implants, ridge augmentation, extraction sites and periradicular surgery as a specialized or elective technique. - Benefits are available when reported with periodontal flap surgery (D4240, D4241, D4260, D4261). - Benefits are denied when done on the same day as bone grafts (D4263, D4264), guided tissue regeneration (D4266, D4267) or tissue grafts (D4271, D4273, D4275). 	
D4266 ▲	Guided tissue regeneration – resorbable barrier, per site A membrane is placed over the root surfaces or defect area following surgical exposure and debridement. The mucoperiosteal flaps are then adapted over the membrane and sutured. The membrane is placed to exclude epithelium and gingival connective tissue from the healing wound. This procedure may require subsequent surgical procedures to correct the gingival contours. Guided tissue regeneration may also be carried out in conjunction with bone replacement grafts or to correct deformities resulting from inadequate faciolingual bone width in an edentulous area. When guided tissue regeneration is used in association with a tooth, each site on a specific tooth should be reported separately with this code. When no tooth is present, each site should be reported separately. Definition for the term "site" precedes code D4210.	<ul style="list-style-type: none"> - Benefits are available only when billed for natural teeth. Benefits for these procedures when billed in conjunction with implants, ridge augmentation, extraction sites, periradicular surgery, etc. are denied as a specialized or elective technique. - Benefits for guided tissue regeneration are denied in conjunction with soft tissue grafts (D4271, D4273, D4275) in the same surgical area. - A bone graft is required in order to benefit the guided tissue regeneration. - Maximum benefit for guided tissue regeneration is two sites per quadrant. GTR for more than two sites will be denied to the eligible fee. 	Perio Chart

Prosthodontics (Removable)

Local anesthesia is usually considered part of Removable Prosthodontic procedures.

General Guidelines

Removable cast partials are not a benefit for patients under age 16.

The fees for prosthetic procedures includes services such as, but not limited to, tooth preparation, impressions, all models, guide planes, diagnostic wax-up, laboratory fees, occlusal adjustment within 6 months after the insertion and other associated procedures. Treatment involving specialized techniques, precious metals for removable appliances, precision attachments for partial dentures or bridges, implants and related procedures along with any associated appliances are optional and any additional fee is the patient's responsibility.

Replacement of Removable Prosthodontic appliances (complete dentures, immediate dentures or partial dentures) one per edentulous space, may be a benefit for appliances older than 5 years.

Complete or partial dentures, except in the case of immediate dentures, include any reline/rebase, adjustment or repair required within 6 months of delivery; reline/rebase is denied if performed after 6 months and prior to two years following delivery. Thereafter, reline/rebase is allowed once every two years.

In the case of immediate dentures, reline is allowed any time following the insertion and there after once every two years. The rebase allowance includes the allowance for reline and a separate charge cannot be made to the patient.

Restorations for altering occlusion, involving change in vertical dimension, replacing tooth structure lost by attrition, erosion, abrasion (wear) or for periodontal or orthodontic are not a benefit. Benefits are denied.

Restorations and associated services are not a benefit for overdentures and benefits are denied.

Precision attachments for partial dentures are not a benefit.

Multistage procedures are reported and a benefit upon completion. The completion date for removable prosthesis is the delivery date. Indicate the delivery date when submitting for payment. For patients whose dental coverage has been terminated; indicate the preparation date in a narrative.

If a new denture is placed within 24 months of a rebase, HMAA payment for the rebase will be deducted from the allowance for the new denture.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5110	Complete denture – maxillary		
D5120	Complete denture – mandibular		
D5130 D5140	Immediate denture – maxillary Immediate denture – mandibular		
	Includes limited follow-up care only; does not include required future rebasing/relining procedure(s) or a complete new denture.		
D5211	Maxillary partial denture – resin base (including any conventional clasps, rests and teeth)		Tooth Chart
D5212	Mandibular partial denture – resin base (including any conventional clasps, rests and teeth)		
	Includes acrylic resin base denture with resin or wrought wire clasps.		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5670	Replace all teeth and acrylic on cast metal framework (maxillary)	<ul style="list-style-type: none"> - The allowance for this benefit includes reline and rebase and a separate charge cannot be made to the patient. - These procedures only apply to partials with four or more teeth. For situations involving fewer than four teeth, the per tooth repair codes (D5640/D5650) should be used. - Benefit is allowed two years following date of partial denture insertion. - Benefit is allowed once per partial denture. 	Tooth Chart
D5671 ◆	Replace all teeth and acrylic on cast metal framework (mandibular)		
D5710	Rebase complete maxillary denture		
D5711	Rebase complete mandibular denture		
D5720	Rebase maxillary partial denture		
D5721 ◆	Rebase mandibular partial denture		
D5730	Reline complete maxillary denture (chairside)	If a new denture is placed within 6 months of a chairside reline, the HMAA payment will be deducted from the allowance for the new denture.	
D5731	Reline complete mandibular denture (chairside)		
D5740	Reline maxillary partial denture (chairside)		
D5741 ◆	Reline mandibular partial denture (chairside)		
D5750	Reline complete maxillary denture (laboratory)	If a new denture is placed within 12 months of a laboratory reline, the HMAA payment will be deducted from the allowance for the new denture.	
D5751	Reline complete mandibular denture (laboratory)		
D5760	Reline maxillary partial denture (laboratory)		
D5761 ◆	Reline mandibular partial denture (laboratory)		
Interim Prosthesis			
A provisional prosthesis designed for use over a limited period of time, after which it is to be replaced by a more definitive restoration.			
D5810	Interim complete denture (maxillary)	Not a benefit of the plan	
D5811	Interim complete denture (mandibular)		
D5820	Interim partial denture (maxillary)	<ul style="list-style-type: none"> - Patients are allowed one interim partial denture to replace an extracted or lost permanent anterior tooth if provided within 21 days of the extraction or when the tooth was lost. Interim partial denture is denied and chargeable to the patient if submitted for other than replacement of a recently extracted or lost tooth. - Indicate recently extracted tooth number and date of extraction. 	Narrative
D5821 ◆	Interim partial denture (mandibular) Includes any necessary clasps and rests.		
		Valid Tooth #'s : 5-12 and 22-27	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5850 D5851 ◆	Tissue conditioning, maxillary Tissue conditioning, mandibular Treatment relines using materials designed to heal unhealthy ridges prior to more definitive final restoration.	- A maximum of two tissue conditioning treatments per denture is allowed prior to impressions for relines, rebases or denture prostheses. The patient is responsible for the cost of additional treatments. - Tissue conditioning is a benefit if done prior to insertion, but not on the same day as insertion.	
D5860 ◆	Overdenture – complete, by report Describe and document procedures as performed. Other separate procedures may be required concurrent to D5860.	- Benefit is limited to the allowance of a complete denture (D5110/D5120) and processed to the limitations of a complete denture. - Restorations and associated services are not a benefit for overdentures and benefits are denied.	
D5861 ◆	Overdenture – partial, by report Describe and document procedures as performed. Other separate procedures may be required concurrent to D5861.	- The benefit is limited to the allowance of a partial denture (D5213/D5214) and processed to the limitations of a partial denture. - Restorations and associated services are not a benefit for overdentures and benefits are denied.	
D5862	Precision attachment, by report Each set of male and female components should be reported as one precision attachment.	Not a benefit of the plan	
D5867	Replacement of replaceable part of semi-precision or precision attachment (male or female component)	Not a benefit of the plan	
D5875	Modification of removable prosthesis following implant surgery The modification of existing removable prosthesis is sometimes necessary at the time of implant placement and bone graft surgery and is always necessary at the time of the placement of the healing caps. This code could also be used to report the modification of an existing prosthesis when the abutments are placed and retentive elements are placed into the removable prosthesis, thereby reducing the need for a new prosthesis.	Not a benefit of the plan	
D5876	Add metal substructure to acrylic full denture (per arch)	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5899 ◆	Unspecified removable prosthodontic procedure, by report Use for a procedure that is not adequately described by a code. Describe procedure.	- Documentation may include materials used, tooth number, arch, quadrant, or area of the mouth, chair time, X-rays or any other supporting information. - Restorations and associated services are not a benefit for overdentures and benefits are denied. - Upon review of documentation, the appropriate benefit allowance will be applied.	Narrative
D5911	Facial moulage (sectional) A sectional facial moulage impression is a procedure used to record the soft tissue contours of a portion of the face. Occasionally several separate sectional impressions are made, and then reassembled to provide a full facial contour cast. The impression is utilized to create a partial facial moulage and generally is not reusable.	Not a benefit of the plan	
D5912	Facial moulage (complete) Synonymous terminology: facial impression, face mask impression. A complete facial moulage impression is a procedure used to record the soft tissue contours of the whole face. The impression is utilized to create a facial moulage and generally not reusable.	Not a benefit of the plan	
D5913	Nasal prosthesis Synonymous terminology: artificial nose A removable prosthesis attached to the skin, which artificially restores part or all of the nose. Fabrication of a nasal prosthesis requires creation of an original mold. Additional prostheses usually can be made from the same mold, and assuming no further tissue changes occur, the same mold can be utilized for extended periods of time. When a new prosthesis is made from the existing mold, this procedure is termed a nasal prosthesis replacement.	Not a benefit of the plan	
D5914	Auricular prosthesis Synonymous terminology: artificial ear, ear prosthesis. A removable prosthesis, which artificially restore part of all of the natural ear. Usually, replacement prosthesis can be made from the original mold if tissue bed changes have not occurred. Creation of an auricular prosthesis requires fabrication of a mold, from which additional prostheses usually can be made, as needed later (auricular prosthesis, replacement).	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5915	Orbital prosthesis A prosthesis, which artificially restores the eye, eyelids, and adjacent hard and soft tissue, lost as a result of trauma or surgery. Fabrication of an orbital prosthesis requires creation of an original mold. Additional prostheses usually can be made from the same mold, and assuming no further tissue changes occur, the same mold can be utilized for extended periods of time. When a new prosthesis is made from the existing mold, this procedure is termed an orbital prosthesis replacement.	Not a benefit of the plan	
D5916	Ocular prosthesis Synonymous terminology: artificial eye, glass eye A prosthesis, which artificially replaces an eye missing as a result of trauma, surgery or congenital absence. The prosthesis does not replace missing eyelids or adjacent skin, mucosa or muscle. Ocular prosthesis require semiannual or annual cleaning and polishing. Also, occasional revisions to re-adapt the prosthesis to the tissue bed may be necessary. Glass eyes are rarely made and cannot be re-adapted.	Not a benefit of the plan	
D5919	Facial prosthesis Synonymous terminology: prosthetic dressing A removable prosthesis, which artificially replaces a portion of the face, lost due to surgery, trauma or congenital absence. Flexion of natural tissues may preclude adaption and movement of the prosthesis to match the adjacent skin. Salivary leakage, when communicating with the oral cavity, adversely affects retention.	Not a benefit of the plan	
D5922	Nasal septal prosthesis Synonymous terminology: Septal plug, septal button. Removable prosthesis to occlude (obdurate) a hole within the nasal septal wall. Adverse chemical degradation in this moist environment may require frequent replacement. Silicone prostheses are occasionally subject to fungal invasion.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5923	<p>Ocular prosthesis, interim Synonymous terminology: Eye shell, shell, ocular conformer, conformer.</p> <p>A temporary replacement generally made of clear acrylic resin for an eye lost due to surgery or trauma. No attempt is made to re-establish esthetics. Fabrication of an interim ocular prosthesis generally implies subsequent fabrication of an aesthetic ocular prosthesis.</p>	Not a benefit of the plan	
D5924	<p>Cranial prosthesis Synonymous terminology: Skull plate, cranioplasty prosthesis, cranial implant.</p> <p>A biocompatible, permanently implanted replacement of a portion of the skull bones; an artificial replacement for a portion of the skull bone.</p>	Not a benefit of the plan	
D5925	<p>Facial augmentation implant prosthesis Synonymous terminology: facial implant.</p> <p>An implantable biocompatible material generally onlaid upon an existing bony area beneath the skin tissue to fill in or collectively raise portions of the overlying facial skin tissues to create acceptable contours.</p>	Not a benefit of the plan	
D5926	<p>Nasal prosthesis, replacement Synonymous terminology: replacement nose.</p> <p>An artificial nose produced from a previously made mold. A replacement prosthesis does not require fabrication of a new mold. Generally, several prostheses can be made from the same mold assuming no changes occur in the tissue bed due to surgery or age related topographical variations.</p>	Not a benefit of the plan	
D5927	<p>Auricular prosthesis, replacement Synonymous terminology: replacement ear.</p> <p>An artificial ear produced from a previously made mold. A replacement prosthesis does not require fabrication of a new mold. Generally, several prostheses can be made from the same mold assuming no changes occur in the tissue bed due to surgery or age related topographical variations.</p>	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5928	Orbital prosthesis, replacement A replacement for a previously made orbital prosthesis. A replacement prosthesis does not require fabrication of a new mold. Generally, several prostheses can be made from the same mold assuming no changes occur in the tissue bed due to surgery or age related topographical variations.	Not a benefit of the plan	
D5929	Facial prosthesis, replacement A replacement facial prosthesis made from original mold. A replacement prosthesis does not require fabrication of a new mold. Generally, several prostheses can be made from the same mold assuming no changes occur in the tissue bed due to surgery or age related topographical variations.	Not a benefit of the plan	
D5931	Obturator prosthesis, surgical Synonymous terminology: Obturator, surgical stayplate, immediate temporary obturator. A temporary prosthesis inserted during or immediately following surgical or traumatic loss of a portion or all of one or both maxillary bones and contiguous alveolar structures (e.g., gingival tissue, teeth). Frequent revisions of surgical obturators are necessary during the ensuing healing phase (approximately six months). Some dentist prefer to replace many or all teeth removed by the surgical procedure in the surgical obturator while other do not replace any teeth. Further surgical revisions may require fabrication of another surgical obturator (e.g., an initially planned small defect may be revised and greatly enlarged after the final pathology report indicates margins are not free of tumor).	Not a benefit of the plan	
D5932	Obturator prosthesis, definitive Synonymous terminology: obturator. A prosthesis, which artificially replaces part or all of the maxilla and associated teeth, lost due to surgery, trauma or congenital defects. A definitive obturator is made when it is deemed that further tissue changes or recurrence of tumor are unlikely and a more permanent prosthetic rehabilitation can be achieved; it is intended for long-term use.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5933	<p>Obturator prosthesis, modification Synonymous terminology: adjustment, denture adjustment, temporary or office reline.</p> <p>Revision or alteration of an existing obturator (surgical, interim, or definitive); possible modifications include relief of the denture base due to tissue compression, augmentation of the seal or peripheral areas to effect adequate sealing or separation between the nasal and oral cavities.</p>	Not a benefit of the plan	
D5934	<p>Mandibular resection prosthesis with guide flange Synonymous terminology: resection device, resection appliance.</p> <p>A prosthesis which guides the remaining portion of the mandible, left after a partial resection, into a more normal relationship with the maxilla. This allows for some tooth-to-tooth or an improved tooth contact. It may also artificially replace missing teeth and thereby increase masticatory efficiency.</p>	Not a benefit of the plan	
D5935	<p>Mandibular resection prosthesis without guide flange</p> <p>A prosthesis which helps guide the partially resected mandible to more normal relation with the maxilla allowing for increased tooth contract. It does not have a flange or ramp, however, to assist in directional closure. It may replace missing teeth and thereby increase masticatory efficiency.</p> <p>Dentists who treat mandibulectomy patients may refer to replace some, all or none of the teeth in the defect area. Frequently, the defect's margins preclude even partial replacement. Use of a guide (a mandibular resection prosthesis with a guide flange) may not be possible due to anatomical limitation or poor patient tolerance. Ramps, extended occlusal arrangements and irregular occlusal positioning relative to the denture foundation frequently preclude stability of the prostheses, and thus some prostheses are poorly tolerated under such adverse circumstances.</p>	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5936	<p>Obturator prosthesis, interim Synonymous terminology: immediate post-operative obturator.</p> <p>A prosthesis which is made following completion of the initial healing after a surgical resection of a portion or all of one or both the maxillae; frequently many or all teeth in the defect area are replaced by this prosthesis. This prosthesis replaces the surgical obturator, which is usually inserted at, or immediately following the resection.</p> <p>Generally, in interim obturator is made to facilitate closure of the resultant defect after initial healing has been completed. Unlike the surgical obturator, which usually is made prior to surgery and frequently revised in the operating room during surgery, the interim obturator is made when the defect margins are clearly defined and further surgical revisions are not planned. It is a provisional prosthesis, which may replace some or all lost teeth, and other lost bone and soft tissue structures. Also, it frequently must be revised (termed an obturator prosthesis modification) during subsequent dental procedures (e.g., restorations, gingival surgery) as well as to compensate for further tissue shrinkage before a definitive obturator prosthesis is made.</p>	Not a benefit of the plan	
D5937	<p>Trismus appliance (not for TMD treatment) Synonymous terminology: occlusal device for mandibular trismus, dynamic bite opener.</p> <p>A prosthesis, which assists the patient in increasing their oral aperture width in order to eat as well as maintain oral hygiene.</p> <p>Several version and designs are possible, all intending to ease the severe lack of oral opening experienced by many patient immediately following extensive intraoral surgical procedure.</p>	Not a benefit of the plan	
D5951	<p>Feeding aid Synonymous terminology: feeding prosthesis.</p> <p>A prosthesis, which maintains the right and left maxillary segments of the infant cleft palate patient in their proper orientation until surgery is performed to repair the cleft. It closes the oral-nasal cavity defect, thus enhancing sucking and swallowing.</p> <p>Used on an interim basis, this prosthesis achieves separation of the oral and nasal cavities in infants born with wide clefts necessitating delay closure. It is eliminated if surgical closure can be effected or, alternatively, with eruption of the deciduous dentition a pediatric speech aid may be made to facilitate closure of the defect.</p>	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5952	<p>Speech aid prosthesis, pediatric Synonymous terminology: nasopharyngeal obturator, speech appliance, obturator, cleft palate appliance, prosthetic speech aid, speech bulb.</p> <p>A temporary or interim prosthesis used to close a defect in the hard and/or soft palate. It may replace tissue lost due to developmental or surgical alterations. It is necessary for the production of intelligible speech. Normal lateral growth of the palatal bones necessitates occasional replacement of this prosthesis. Intermittent revisions of the obturator section can assist in maintenance of the palatalpharyngeal closure (termed a speech aid prosthesis modification). Frequently, such prostheses are not fabricated before the deciduous dentition is fully erupted since clasp retention is often essential.</p>	Not a benefit of the plan	
D5953	<p>Speech aid prosthesis, adult Synonymous terminology: prosthetic speech appliance, speech aid, speech bulb.</p> <p>A definitive prosthesis, which can improve speech in adult cleft palate patients either by obturating (sealing off) a palatal cleft or fistula, or occasionally by assisting an incompetent soft palate. Both mechanisms are necessary to achieve velopharyngeal competency. Generally, this prosthesis is fabricated when no further growth is anticipated and the objective is to achieve long-term use. Hence, more precise materials and techniques are utilized. Occasionally such procedures are accomplished in conjunction with precision attachments in crown work undertaken on some or all maxillary teeth to achieve improved aesthetics.</p>	Not a benefit of the plan	
D5954	<p>Palatal augmentation prosthesis Synonymous terminology: superimposed prosthesis, maxillary glossectomy prosthesis, maxillary speech prosthesis, palatal drop prosthesis.</p> <p>A removable prosthesis which alters the hard and/or soft tissue palate's topographical form adjacent to the tongue.</p>	Not a benefit of the plan	
D5955	<p>Palatal lift prosthesis, definitive</p> <p>A prosthesis which elevates the soft palate superiorly and aids in restoration of soft palate functions which may be lost due to an acquired, congenital or developmental defect.</p> <p>A definitive palatal lift is usually made for patients whose experience with an interim palatal lift has been successful, especially if surgical alterations are deemed unwarranted.</p>	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5958	Palatal lift prosthesis, interim Synonymous terminology: diagnostic palatal lift A prosthesis which elevates and assists in restoring soft palate function which may be lost due to clefting, surgery, trauma or unknown paralysis. It is intended for interim use to determine its usefulness in achieving palatopharyngeal competency or enhance swallowing reflexes. This prosthesis is intended for interim use as diagnostic aid to assess the level of possible improvement in speech intelligibility. Some clinicians believe use of a palatal lift on an interim basis may stimulate an otherwise flaccid soft palate to increase functional activity, subsequently lessening its need.	Not a benefit of the plan	
D5959	Palatal lift prosthesis, modification Synonymous terminology: revision of lift, adjustment. Alterations in the adaptation, contour, form or function of an existing palatal lift necessitated due to tissue impingement, lack of function, poor clasp adaptation or the like.	Not a benefit of the plan	
D5960	Speech aid prosthesis, modification Synonymous terminology: adjustment, repair, revision. Any revision of a pediatric or adult speech aid not necessitating its replacement. Frequently, revisions of the obturating sections of any speech aid are required to facilitate enhanced speech intelligibility. Such revisions or repairs do not require complete remaking of the prosthesis, thus extending its longevity.	Not a benefit of the plan	
D5982	Surgical stent Synonymous terminology: periodontal stent, skin graft stent, columellar stent. Stents are utilized to apply pressure to soft tissue to facilitate healing and prevent cicatrization of collapse. A surgical stent maybe required in surgical and post-surgical revisions to achieve close approximation of tissues. Usually such materials as temporary or interim soft denture liners, gutta percha, or dental modeling impression compound may be used.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5983	<p>Radiation carrier Synonymous terminology: radiotherapy prosthesis, carrier prosthesis, radiation applicator, radium carrier, intracavity carrier, intracavity applicator.</p> <p>A device used to administer radiation to confined areas by means of capsules, beads or needles of radiation emitting materials such as radium or cesium. Its function is to hold the radiation source securely in the same location during the entire period of treatment. Radiation oncologist occasionally request these devices to achieve close approximation and controlled application of the radiation to a tumor deemed amiable to eradication.</p>	Not a benefit of the plan	
D5984	<p>Radiation shield Synonymous terminology: radiation stent, tongue protector, lead shield.</p> <p>An intraoral prosthesis designed to shield adjacent tissues from radiation during orthovoltage treatment of malignant lesions of the head and neck region.</p>	Not a benefit of the plan	
D5985	<p>Radiation cone locator Synonymous terminology: docking device, cone locator.</p> <p>A prosthesis utilized to direct and reduplicate the path of radiation to an oral tumor during a split course of irradiation.</p>	Not a benefit of the plan	
D5986	<p>Fluoride gel carrier Synonymous terminology: fluoride applicator</p> <p>A prosthesis, which covers the teeth in either dental arch and is used to apply topical fluoride in close proximity to tooth enamel and dentin for several minutes daily.</p>	Not a benefit of the plan	
D5987	<p>Commissure splint Synonymous terminology: lip splint</p> <p>A device placed between the lips, which assists in achieving increase opening between the lips. Use of such devices enhances opening where surgical, chemical or electrical alterations of the lips has resulted in severe restriction or contractures.</p>	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D5988	<p>Surgical splint Synonymous terminology: Gunning splint, modified Gunning splint, labiolingual splint, fenestrated splint, Kingsley splint, cast metal splint</p> <p>Splints are designed to utilize existing teeth and/or alveolar processes as points of anchorage to assist in stabilization and immobilization of broken bones during healing. They are used to re-establish, as much as possible, normal occlusal relationships during the process of immobilization. Frequently, existing prostheses (e.g., a patient's complete dentures) can be modified to serve as surgical splints. Frequently, surgical splint have arch bars added to facilitate intermaxillary fixation. Rubber elastics may be used to assist in this process. Circummandibular eyelet hooks can be utilized for enhanced stabilization with wiring to adjacent bone.</p>	Not a benefit of the plan	
D5991	<p>Topical medicament carrier</p> <p>A custom fabricated carrier that covers the teeth and alveolar mucosa, or alveolar mucosa alone, and is used to deliver topical corticosteroids and similar effective medicaments for maximum sustained contact with the alveolar ridge and/or attached gingival tissues for the control and management of immunologically mediated vesiculobullous mucosal, chronic recurrent ulcerative, and other desquamative diseases of the gingival and oral mucosa.</p>	Not a benefit of the plan	
D5999	<p>Unspecified maxillofacial prosthesis, by report</p> <p>Used for a procedure that is not adequately described by a code. Describe procedure.</p>	<p>- Documentation should include materials used, tooth number, arch, quadrant, or area of the mouth, chair time, X-rays or any other supporting information.</p> <p>- Upon review of documentation, the appropriate benefit allowance will be applied.</p>	Narrative

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

Implant Services

Local anesthesia is usually considered to be part of Implant Services procedures. Report surgical implant procedure using codes in this section.

Report surgical implant procedure using codes in this section; prosthetic devices should be reported using existing fixed or removable prosthetic codes.

General Guidelines

Implant bodies are not covered by all HMAA benefit plans. Please refer to current group benefit information for specific coverage. The following guidelines apply only to those group plans with the implant rider:

Implants are limited to endosteal implants submitted as ADA procedure code D6010.

An implant is allowed as an alternate benefit only if replacing a missing permanent tooth between two natural teeth.

The implant will not be payable for use as an abutment for a bridge or removable prosthesis.

Implant maintenance procedures, including but not limited to; removal of prosthesis, cleaning of prosthesis and abutments, reinsertion of prosthesis, repair implant supported prosthesis, repair implant abutment and implant removal are denied.

Implants are denied for patients under age 16.

Implant procedures will be paid as an alternate benefit equivalent to the payment for two retainers of a 3-unit fixed partial denture. Therefore, the adjacent teeth are subject to treatment limitations for existing inlays, onlays, crowns, veneers and fixed and removable prosthodontics. Appropriate processing policies will be applied. As an example, for plans that have a 5-year limitation on crowns: a crown placed on a tooth adjacent to an implant is not a benefit for 5 years following implant placement.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D6010 ◆	Surgical placement of implant body; endosteal implant Includes second stage surgery and placement of healing cap.	Valid Tooth #'s: 2-15, 18-31	X-ray
D6012	Surgical placement of interim implant body for transitional prosthesis: endosteal implant Includes removal during later therapy to accommodate the definitive restoration, which may include placement of other implants.	Not a benefit of the plan	
D6040	Surgical placement: eposteal implant An eposteal (subperiosteal) framework of a biocompatible material designed and fabricated to fit on the surface of the bone of the mandible or maxilla with permucosal extensions which provide support and attachment of a prosthesis. This may be a complete arch or unilateral appliance. Eposteal implants rest upon the bone and under the periosteum.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D6050	Surgical placement: transosteal implant	Not a benefit of the plan	
	<p>A transosteal (transosseous) biocompatible device with threaded posts penetrating both the superior and inferior cortical bone plates of the mandibular symphysis and exiting through the permucosa provider support and attachment for a dental prosthesis. Transosteal implants are placed completely through the bone and into the oral cavity from extraoral or intraoral.</p>		
D6100	Implant removal, by report	Not a benefit of the plan	
	<p>This procedure involves the surgical removal of an implant.</p>		

Implant/Abutment Supported Prosthetics

Porcelain/ceramic crowns include all ceramic, porcelain, polymer-reinforced porcelain and porcelain fused to metal crowns. Resin crowns and resin metal crown include all reinforced heat and/or pressure-cured resin materials.

General Guidelines

Anterior Teeth: Replacing 1 to 4 missing teeth with an implant supported prosthesis will be payable as the alternate benefit up to 4 pontics in the anterior segment, only when there are teeth present anterior and posterior to the implants.

Posterior Teeth: Replacing 1 to 3 missing teeth with an implant supported prosthesis will be paid as the alternate benefit up to 3 pontics in the posterior segment, only when there are teeth present anterior and posterior to the implants.

The X-ray should be post-operative and show the implant body. When submitting for preauthorization, attach the most current X-ray for tentative approval. The post-operative X-ray is required for payment on preauthorization.

When a distal extension edentulous space is involved, the appropriate alternate benefit will be applied as follows: If the implant crown is for one tooth, and it is adjacent to a natural tooth, the alternate benefit of one pontic will be applied. This benefit is allowed twice per arch (once on the left side and once on the right side) within a 5-year period. If adjacent implant crowns are for more than one tooth, the alternate benefit of a removable partial denture will be applied. This benefit is allowed once per arch per 5-year period on the left or right side. If an implant crown is placed on the opposite side within the time limitation, the combined benefit (of the implant crowns on both sides) will not exceed the benefit of two pontics.

A bridge between an implant tooth and a natural tooth is denied.

D6053 ◆	Implant/abutment supported removable denture for completely edentulous arch	Upon review, the alternate benefit of D5110/D5120 will be applied.	Post-op X-ray
D6054 ◆	Implant/abutment supported removable denture for partially edentulous arch	Upon review, the alternate benefit of D5213/D5214 will be applied.	Post-op X-ray

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D6055	Dental implant supported connecting bar A device attached to transmucosal abutments to stabilize and anchor a removable overdenture prosthesis.	Not a benefit of the plan	
D6056	Prefabricated abutment – includes placement A connection to an implant that is a manufactured component usually made of machine high noble metal, titanium, titanium alloy or ceramic. Modification of a prefabricated abutment may be necessary, and is accomplished by altering its shape using dental burrs/diamonds.	Not a benefit of the plan	
D6057	Custom abutment – includes placement A connection to an implant that is a fabricated component, usually by a laboratory, specific for an individual application. A custom abutment is typically fabricated using a casting process and usually is made of noble or high noble metal. A 'UCLA abutment' is an example of this type abutment.	Not a benefit of the plan	
D6058 ◆	Abutment supported porcelain/ceramic crown A single crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.	Upon review, the alternate benefit of D6210/D6240 will be applied.	Post-op X-ray
D6059 ◆	Abutment supported porcelain fused to metal crown (high noble metal) A single metal-ceramic crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.	Upon review, the alternate benefit of D6210/D6240 will be applied.	Post-op X-ray
D6060 ◆	Abutment supported porcelain fused to metal crown (predominantly base metal) A single metal-ceramic crown restoration that is retained, supported and stabilized by an abutment on an implant; may be screw retained or cemented.	Upon review, the alternate benefit of D6211/D6241 will be applied.	Post-op X-ray

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

Prosthodontics, Fixed

Each retainer and each pontic constitutes a unit in a fixed partial denture. Local anesthesia is usually considered to be part of Fixed Prosthodontic procedures. The words "bridge" and "bridgework" are synonymous with the term "fixed partial denture."

Classification of Metals – The noble metal classification system has been adopted as a more precise method of reporting various alloys used in dentistry. The alloys are defined on the basis of the percentage of noble metal content: high noble – Gold (Au), Palladium (Pd), and/or Platinum (Pt) > 60%(with at least 40% Au), noble – Gold (Au), Palladium (Pd), and/or Platinum (Pt) > 25%; predominantly base – Gold (Au), Palladium (Pd), and/or Platinum (Pt) < 25%.

General Guidelines

Separate charges are not allowed for crown/fixed partial denture removal, tooth preparation, models, electro surgery, temporary restorations, cement bases, impressions, laboratory fees, laser technology, local anesthesia, occlusal adjustments within six months after the insertion, and other associated procedures as these services are components of a complete procedure for which a single charge is made. If submitted as a separate charge(s) the fees for these procedures will be disallowed.

If porcelain/resin to metal bridgework is placed posterior to the 2nd bicuspid, it will be processed as the alternate benefit of the metallic equivalent.

Fixed bridges and removable cast partials are not benefits for patients under age 16.

If any unit or tooth within a new bridge has had a restoration still subject to the time limitations, that unit of the bridge will be denied and the patient is responsible for the cost.

Cantilever bridges are limited to the allowed fee of one pontic.

When a retainer or bridge is planned for replacement and the x-rays and other submitted attachments do not indicate decay, fracture and/or the tooth being otherwise compromised, the provider is requested to provide a narrative to state the reason(s) for replacement.

The following are optional procedures and require the agreement of the patient to assume cost:

- Treatment involving specialized techniques
- Precision attachments for dentures, bridges or implants (related procedures along with any associated appliances)

A posterior fixed bridge and removable partial denture are not a benefit in the same arch in the same treatment plan. An anterior fixed bridge with not more than 4 pontics is allowed in the same arch with a posterior removable partial denture.

Anterior bridges spanning more than 4 pontics or posterior bridges spanning more than 3 pontics will be processed as the alternate benefit of a removable partial denture and held to the benefit of a partial denture.

Restorations for altering occlusion, involving vertical dimension, replacing tooth structure lost by attrition, erosion, abrasion (wear) or for periodontal, orthodontic or other splinting are not a benefit.

The following conditions are not covered benefits and if performed, patients must be informed that they are responsible for cost:

- Additional abutments needed because of abnormal conditions.
- Additional pontics needed to restore a space beyond the normal complement of natural teeth.

Porcelain/ceramic/resin retainers and pontics will be processed as the conventional fixed prosthetics with the patient responsible for the difference to the submitted amount.

Please indicate the insertion date of the appliance when submitting for payment. For patients whose coverage has terminated, also indicate the date of preparation.

Replacement of prosthodontic appliances (complete dentures, partial dentures or bridges) may be payable for prosthodontic appliances older than 5-years.

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

Oral and Maxillofacial Surgery

Local anesthesia is usually considered to be part of Oral and Maxillofacial Surgical procedures. For dental benefit reporting purposes, a quadrant is defined as four or more contiguous teeth and/or teeth spaces distal to the midline.

General Guidelines

The fee for all oral and maxillofacial surgery includes local anesthesia, suturing if needed, and routine post-operative care. Separate fees for these procedures when performed in conjunction with oral and maxillofacial surgery are disallowed when done by the same dentist/dental office and are denied and the approved amount is collectible from the patient when done by another dentist/dental office.

Some oral surgical procedures are considered medical benefits; if the patient has HMAA medical coverage, then the procedure will be processed under the patient's medical plan benefits only. The HMAA dental plan will not act as secondary coverage. The provider may continue to use appropriate dental code(s) and submit the claim using a Dental Claim form. If the patient does not have HMAA medical coverage and a medical carrier statement is required, the claim should be submitted to the patient's medical carrier first.

Exploratory surgery is not a benefit of the plan.

Unsuccessful attempts at extractions are disallowed.

Bone grafts in new extraction sites, with or without an implant, are denied as a specialized technique.

Biopsy of oral tissue – soft (D7286) and Removal of benign odontogenic cyst or tumor up to 1.25 cm (D7450) may be disallowed in conjunction with extraction procedures.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7111 ▲	Extraction, coronal remnants - deciduous tooth	Valid Tooth #'s A-T	
	Removal of soft tissue-retained coronal remnants.		
D7140 ▲	Extraction, erupted tooth or exposed root (elevation and/or forceps removal)		
	Includes routine removal of tooth structure, minor smoothing of socket bone and closure, as necessary.		
D7210 ▲	Surgical removal of erupted tooth requiring elevation of mucoperiosteal flap and removal of bone and/or section of tooth		
	Includes cutting of gingiva and bone, removal of tooth structure, minor smoothing of socket bone and closure.		
D7220 ▲	Removal of impacted tooth – soft tissue		
	Occlusal surface of tooth covered by soft tissue; requires mucoperiosteal flap elevation.		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7230 ▲	Removal of impacted tooth – partially bony Part of crown covered by bone; requires mucoperiosteal flap elevation and bone removal.		
D7240 ▲	Removal of impacted tooth – completely bony Most or all of crown covered by bone; requires mucoperiosteal flap elevation and bone removal.		
D7241 ▲	Removal of impacted tooth – completely bony, with unusual surgical complication Most or all of crown covered by bone; unusually difficult or complicated due to factors such as nerve dissection required, separate closure of maxillary sinus required or aberrant tooth position.		
D7250 ▲	Surgical removal of residual tooth roots (cutting procedure) Includes cutting of soft tissue and bone, removal of tooth structure, and closure.		
D7260 ▲	Oroantral fistula closure Excision of fistulous tract between maxillary sinus and oral cavity and closure by advancement flap.	Valid Tooth #'s 1-16, UR, UL	Operative Report
D7261 ▲	Primary closure of a sinus perforation Subsequent to surgical removal of tooth, exposure of sinus requiring repair, or immediate closure of oroantral or oralnasal communication in absence of fistulus tract.		Operative Report
D7270 ▲	Tooth reimplantation and or stabilization of accidentally evulsed or displaced tooth Includes splinting and/or stabilization.	- Includes post-operative care and removal of splint by the same dentist/dental office. - Narrative should indicate all teeth involved and describe the method of stabilization.	X-ray Narrative
D7272	Tooth transplantation (includes reimplantation from one site to another and splinting and/or stabilization)	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7280 ▲	Surgical access of an unerupted tooth An incision is made and the tissue is reflected and bone removed as necessary to expose the crown of an impacted tooth not intended to be extracted.		X-ray
D7282 ▲	Mobilization of erupted or malpositioned tooth to aid eruption Procedure is by report	When performed in conjunction with other surgery in this immediate area, the benefit is disallowed.	X-ray
D7283 ■	Placement of device to facilitate eruption of impacted tooth Placement of an orthodontic bracket, band or other device on an unerupted tooth, after its exposure, to aid in its eruption. Report the surgical exposure separately using D7280.	Coverage for this procedure is limited to members who have Orthodontic plan benefits.	X-ray
D7285 ▲	Biopsy of oral tissue – hard (bone, tooth) For removal of specimen only. This code involves biopsy of osseous lesions and is not used for apicoectomy/periradicular surgery.	- This service is disallowed when performed in conjunction with an apicoectomy (D3410, D3421, D3425 or D3426), or surgical extraction (D7210), by the same dentist/dental office in the same surgical area and on the same date of service. - This service may be processed under patient's medical benefits.	Pathology Report
D7286 ▲	Biopsy of oral tissue – soft For surgical removal of an architecturally intact specimen only. This code is not used at the same time as codes for apicoectomy/periradicular curettage.	- This service is disallowed when performed in conjunction with an apicoectomy (D3410, D3421, D3425 or D3426), or surgical extraction (D7210), by the same dentist/dental office in the same surgical area and on the same date of service. - This service may be processed under patient's medical benefits.	Pathology Report
D7287	Exfoliative cytological sample collection For collection of non-transepithelial cytology sample via mild scraping of the oral mucosa.	Not a benefit of the plan	
D7288	Brush biopsy – transepithelial sample collection For collection of oral disaggregated transepithelial cells via rotational brushing of the oral mucosa.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7290 ☐	Surgical repositioning of teeth Grafting procedure(s) is/are additional.	Coverage for this procedure is limited to members who have Orthodontic Plan Benefits	Operative Report
D7291 ☐	Transseptal fiberotomy/supra crestal fiberotomy, by report The supraosseous connective tissue attachment is surgically severed around the involved teeth. Where there are adjacent teeth, the transseptal fiberotomy of a single tooth will involve a minimum of three teeth. Since the incisions are within the gingival sulcus and tissue and the root surface is not instrumented, this procedure heals by the reunion of connective tissue with the root surface on which viable periodontal tissue is present (reattachment).	Coverage for this procedure is limited to members who have Orthodontic plan benefits.	Operative Report
D7292	Surgical placement: temporary anchorage device [screw retained plate] requiring surgical flap Insertion of a temporary skeletal anchorage device that is attached to the bone by screws and requires a surgical flap. Includes device removal.	Not a benefit of the plan	
D7293	Surgical placement: temporary anchorage device requiring surgical flap Insertion of a device for temporary skeletal anchorage when a surgical flap is required. Includes device removal.	Not a benefit of the plan	
D7294	Surgical placement: temporary anchorage device without surgical flap Insertion of a device for temporary skeletal anchorage when a surgical flap is not required. Includes device removal.	Not a benefit of the plan	
D7296	Corticotomy - one to three teeth or tooth spaces, per quadrant This procedure involves creating multiple cuts, perforations, or removal of cortical, alveolar or basal bone of the jaw for the purpose of facilitating orthodontic repositioning of the dentition. This procedure includes flap entry and closure. Graft material and membrane, if used, should be reported separately.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ☐ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7297	Corticotomy – four or more teeth or tooth spaces, per quadrant This procedure involves creating multiple cuts, perforations, or removal of cortical, alveolar or basal bone of the jaw for the purpose of facilitating orthodontic repositioning of the dentition. This procedure includes flap entry and closure. Graft material and membrane, if used, should be reported separately.	Not a benefit of the plan	
D7310	Alveoloplasty in conjunction with extractions – four or more teeth or tooth spaces, per quadrant	<ul style="list-style-type: none"> - Alveoloplasty is included in the fee for surgical extractions (D7210-D7250), and is disallowed if performed by the same dentist/dental office in the same surgical area on the same date of service. - Allowed with simple extraction in same quadrant, when periodontal disease is present. - If more than one tooth, indicate additional teeth number in narrative. 	
D7311 ▲	Alveoloplasty in conjunction with extractions – one to three teeth or tooth spaces, per quadrant The alveoloplasty is distinct (separate procedure) from extractions and/or surgical extractions. Usually in preparation for a prosthesis or other treatment such as radiation therapy and transplant surgery.		
D7320	Alveoloplasty not in conjunction with extractions – four or more teeth or tooth spaces, per quadrant		
D7321 ▲	Alveoloplasty not in conjunction with extractions – one to three teeth or tooth spaces, per quadrant No extractions performed in an edentulous area. See D7310/D7311 if teeth are being extracted concurrently with the alveoloplasty. Usually in preparation for a prosthesis or other treatments such as radiation therapy and transplant surgery.	Indicate additional teeth numbers in narrative.	
D7340	Vestibuloplasty – ridge extension (secondary epithelialization)	Not a benefit of the plan	
D7350	Vestibuloplasty – ridge extension (including soft tissue grafts, muscle reattachment, revision of soft tissue attachment and management of hypertrophied and hyperplastic tissue)	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

Surgical Excision of Soft Tissue Lesions

General Guidelines

Pathology Report should include site and size of growth.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7410	Excision of benign lesion up to 1.25 cm	- The benefit for D7410/D7411 is subject to the review of the pathology report and may be included in the benefit for another surgery when performed on the same date of service. - This service may be processed under patient's medical benefits.	Medical Carrier Statement, Pathology Report
D7411 ▲	Excision of benign lesion greater than 1.25 cm		
D7412	Excision of benign lesion, complicated Requires extensive undermining with advancement of rotational flap closure.	Not a benefit of the plan	
D7413	Excision of malignant lesion up to 1.25 cm	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report, Pathology Report
D7414 ▲	Excision of malignant lesion greater than 1.25 cm		
D7415	Excision of malignant lesion, complicated Requires extensive undermining with advancement of rotational flap closure.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

Surgical Excision of Intra-Osseous Lesions

All procedures are subject to coverage under medical plan.

Pathology Report should include site and size of growth.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7440	Excision of malignant tumor - lesion diameter up to 1.25 cm	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report, Pathology Report
D7441 ▲	Excision of malignant tumor - lesion diameter greater than 1.25 cm		
D7450	Removal of benign odontogenic cyst or tumor – lesion diameter up to 1.25 cm	- The benefit for D7450/D7451 is subject to the review of the pathology report and may be including the benefit for another surgery when performed on the same date of service. - This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report, Pathology Report
D7451 ▲	Removal of benign odontogenic cyst or tumor – lesion diameter greater than 1.25 cm		
D7460	Removal of benign nonodontogenic cyst or tumor – lesion diameter up to 1.25 cm	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report, Pathology Report
D7461 ▲	Removal of benign nonodontogenic cyst or tumor – lesion diameter greater than 1.25 cm		
D7465 ▲	Destruction of lesion(s), by physical or chemical method, by report Examples include using cryo, laser or electro surgery.	- Narrative should describe lesion and method of destruction. - This service may be processed under patient's medical benefits.	Narrative
D7471 ▲	Removal of lateral exostosis (maxilla or mandible)		Operative Report
D7472 ▲	Removal of torus palatinus	Valid Quad: UA	Operative Report
D7473 ▲	Removal of torus mandibularis	Valid Quad: LL, LR	Operative Report
D7485 ▲	Surgical reduction of osseous tuberosity	Valid Quad: UL, UR	Operative Report

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7490 ▲	Radical resection of maxilla or mandible Partial resection of maxilla or mandible; removal of lesion and defect with margin of normal appearing bone. Reconstruction and bone grafts should be reported separately.	This service may be processed under patient's medical benefits. Valid Quad: LL, LR	Medical Carrier Statement, Operative Report, Pathology Report

Surgical Incision

General Guidelines

Operative report should include Diagnosis, Operation: site of incision, instrument used and method of drainage.

D7510 ▲	Incision and drainage of abscess – intraoral soft tissue Involves incision through mucosa, including periodontal origins.	- The benefit for D7510 is subject to the review of the operative report and may be included in the benefit for another procedure when performed on the same date of service by the same dentist/dentist office. - This service may be processed under patient's medical benefits.	Operative Report
D7511 ▲	Incision and drainage of abscess – intraoral soft tissue – complicated (includes drainage of multiple fascial spaces) Incision is made intraorally and dissection is extended into adjacent fascial space(s) to provide adequate drainage of abscess/cellulitis.	- The benefit for D7511 is subject to the review of the operative report and may be included in the benefit for another procedure when performed on the same date of service. - This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7520 ▲	Incision and drainage of abscess – extraoral soft tissue Involves incision through skin.	- Incision and drainage of abscess - extraoral soft tissue is a benefit only if dental related infection is present. - This service may be processed under patient's medical benefits.	Operative Report
D7521 ▲	Incision and drainage of abscess – extraoral soft tissue – complicated (includes drainage of multiple fascial spaces) Incision is made extraorally and dissection is extended into adjacent fascial space(s) to provide adequate drainage of abscess/cellulitis.	- Incision and drainage of abscess-extraoral soft tissue is a benefit only if dentally-related infection is present. - Upon review of documentation, the appropriate benefit allowance will be applied. - This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7530 ▲	Removal of foreign body from mucosa, skin, or subcutaneous alveolar tissue	- This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7540 ▲	Removal of reaction producing foreign bodies, musculoskeletal system May include, but is not limited to, removal of splinters, pieces of wire, etc., from muscle and/or bone.	- This service may be processed under patient's medical benefits.	Operative Report

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7550 ▲	Partial ostectomy/sequestrectomy for removal of non-vital bone Removal of loose or sloughed-off dead bone caused by infection or reduced blood supply.	- This service may be processed under patient's medical benefits.	Operative Report
D7560 ▲	Maxillary sinusotomy for removal of tooth fragment or foreign body		Operative Report

Treatment of Fractures – Simple

General Guidelines

All procedures are subject to coverage under medical plan.

A separate fee for splinting wiring or banding is disallowed when performed by the same dentist/dental office rendering the primary procedure.

D7610 ▲	Maxilla – open reduction (teeth immobilized, if present) Teeth may be wired, banded or splinted together to prevent movement. Surgical incision required for interosseous fixation.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7620 ▲	Maxilla – closed reduction (teeth immobilized, if present) No incision required to reduce fracture. See D7610 if interosseous fixation is applied.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7630 ▲	Mandible – open reduction (teeth immobilized, if present) Teeth may be wired, banded or splinted together to prevent movement.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7640 ▲	Mandible – closed reduction (teeth immobilized, if present) No incision required to reduce fracture. See D7630 if interosseous fixation is applied.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7650 ▲	Malar and or zygomatic arch – open reduction	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7660 ▲	Malar and or zygomatic arch – closed reduction	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7670 ▲	Alveolus – closed reduction, may include stabilization of teeth Teeth may be wired, banded or splinted together to prevent movement.	This service may be processed under patient's medical benefits.	Medical Carrier Statement Operative Report
D7671 ▲	Alveolus – open reduction, may include stabilization of teeth Teeth may be wired, banded or splinted together to prevent movement.	This service may be processed under patient's medical benefits.	Medical Carrier Statement Operative Report X-ray
D7680	Facial bones – complicated reduction with fixation and multiple surgical approaches Facial bones include upper and lower jaw, cheek, and bones around eyes, nose and ears.	Not a benefit of the plan	

Treatment of Fractures – Compound

General Guidelines

All procedures are subject to coverage under medical plan.

A separate fee for splinting, wiring or banding is disallowed when performed by the same dentist/dental office rendering the primary procedure.

D7710 ▲	Maxilla – open reduction Surgical incision required to reduce fracture.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7720 ▲	Maxilla – closed reduction	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7730 ▲	Mandible – open reduction Surgical incision required to reduce fracture.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7740 ▲	Mandible – closed reduction	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7750 ▲	Malar and/or zygomatic arch – open reduction Surgical incision required to reduce fracture.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7760 ▲	Malar and/or zygomatic arch – closed reduction	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7770 ▲	Alveolus – open reduction stabilization of teeth Fractured bone(s) are exposed to mouth or outside the face. Surgical incision required to reduce fracture.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7771 ▲	Alveolus, closed reduction stabilization of teeth Fractured bone(s) are exposed to mouth or outside the face.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7780	Facial bones – complicated reduction with fixation and multiple surgical approaches Surgical incision required to reduce fracture. Facial bones include upper and lower jaw, cheek, and bones around eyes, nose and ears.	Not a benefit of the plan	
D7810	Open reduction of dislocation Access to TMJ via surgical opening	Not a benefit of the plan	
D7820	Closed reduction of dislocation Joint manipulated into place; no surgical exposure.	Not a benefit of the plan	
D7830	Manipulation under anesthesia Usually done under general anesthesia or intravenous sedation.	Not a benefit of the plan	
D7840	Condylectomy Surgical removal of all or portion of the mandibular condyle (separate procedure)	Not a benefit of the plan	
D7850	Surgical discectomy, with/without implant Excision of the intra-articular disc of a joint.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7852	Disc repair Repositioning and/or sculpting of disc; repair of perforated posterior attachment.	Not a benefit of the plan	
D7854	Synovectomy Excision of a portion or all of the synovial membrane of a joint.	Not a benefit of the plan	
D7856	Myotomy Cutting of muscle for therapeutic purposes (separate procedure).	Not a benefit of the plan	
D7858	Joint reconstruction Reconstruction of osseous components including or excluding soft tissues of the joint with autogenous, homologous, or alloplastic materials.	Not a benefit of the plan	
D7860	Arthrotomy Cutting into joint (separate procedure).	Not a benefit of the plan	
D7865	Arthroplasty Reduction of osseous components of the joint to create a pseudoarthrosis or eliminate an irregular remodeling pattern (osteophytes).	Not a benefit of the plan	
D7870	Arthrocentesis Withdrawal of fluid from a joint space by aspiration.	Not a benefit of the plan	
D7871	Non-arthroscopic lysis and lavage Inflow and outflow catheters are placed into the joint space. The joint is lavaged and manipulated as indicated in an effort to release minor adhesions and synovial vacuum phenomenon as well as to remove inflammation products from the joint space.	Not a benefit of the plan	
D7872	Arthroscopy – diagnosis, with or without biopsy	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7873	Arthroscopy – surgical: lavage and lysis of adhesions Removal of adhesions using the arthroscope and lavage of the joint cavities.	Not a benefit of the plan	
D7874	Arthroscopy – surgical: disc repositioning and stabilization Repositioning and stabilization of disc using arthroscopic techniques.	Not a benefit of the plan	
D7875	Arthroscopy – surgical: synovectomy Removal of inflamed and hyperplastic synovium (partial/complete) via an arthroscopic technique.	Not a benefit of the plan	
D7876	Arthroscopy – surgical: discectomy Removal of disc and remodeled posterior attachment via the arthroscope.	Not a benefit of the plan	
D7877	Arthroscopy – surgical: debridement Removal of pathologic hard and/or soft tissue using the arthroscope.	Not a benefit of the plan	
D7880	Occlusal orthotic device, by report Presently includes splints provided for treatment of temporomandibular joint dysfunction.	Not a benefit of the plan	
D7899	Unspecified TMD therapy, by report Used for procedure that is not adequately described by a code. Describe procedure.	Not a benefit of the plan	
D7910 ▲	Suture of recent small wounds up to 5 cm	- Specify site in operative report. - This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7911	Complicated suture – up to 5 cm	Not a benefit of the plan	
D7912	Complicated suture – greater than 5 cm		

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ◼ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7920	Skin graft (identify defect covered, location and type of graft)	Not a benefit of the plan	
D7940	Osteoplasty – for orthognathic deformities Reconstruction of jaws for correction of congenital, developmental or acquired traumatic or surgical deformity.	Not a benefit of the plan	
D7941	Osteotomy – mandibular rami	Not a benefit of the plan	
D7943	Osteotomy – mandibular rami with bone graft; includes obtaining the graft	Not a benefit of the plan	
D7944	Osteotomy – segmented or subapical Reports by range of tooth numbers with segment.	Not a benefit of the plan	
D7945	Osteotomy – body of mandible Surgical section of lower jaw. This includes the surgical exposure, bone cut, fixation, routine wound closure and normal post-operative follow-up care.	Not a benefit of the plan	
D7946	LeFort I (maxilla – total) Surgical section of the upper jaw. This includes the surgical exposure, bone cuts, downfracture, repositioning, fixation, routine wound closure and normal post-operative follow-up care.	Not a benefit of the plan	
D7947	LeFort I (maxilla – segmented) When reporting a surgically assisted palatal expansion without downfracture, this code would entail a reduced service and should be “by report.”	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7948	LeFort II or LeFort III (osteoplasty of facial bones for midface hypoplasia or retrusion) – without bone graft Surgical section of the upper jaw. This includes the surgical exposure, bone cuts, downfracture, segmentation of maxilla, repositioning, fixation, routine wound closure and normal post-operative follow-up care.	Not a benefit of the plan	
D7949	LeFort II or LeFort III – with bone grafts Includes obtaining autografts.	Not a benefit of the plan	
D7950	Osseous, osteoperiosteal, or cartilage graft of the mandible or maxilla – autogenous or nonautogenous, by report This code may be used for ridge augmentation or reconstruction to increase height, width and/or volume of residual alveolar ridge. It includes obtaining autograft and/or allograft material. Placement of a barrier membrane, if used, should be reported separately.	Not a benefit of the plan	
D7951	Sinus augmentation with bone or bone substitutes The augmentation of the sinus cavity to increase alveolar height for reconstruction of edentulous portions of the maxilla. This includes obtaining the bone or bone substitutes. Placement of a barrier membrane, if used, should be reported separately.	Not a benefit of the plan	
D7953	Bone replacement graft for ridge preservation – per site Osseous autograft, allograft or non-osseous graft is placed in an extraction site at the time of extraction to preserve ridge integrity (e.g. clinically indicated in preparation for implant reconstruction or where alveolar contour is critical to planned prosthetic reconstruction). Membrane, if used should be reported separately.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7955	Repair of maxillofacial soft and/or hard tissue defect Reconstruction of surgical, traumatic, or congenital defects of the facial bones, including the mandible, may utilize autograft, allograft, or alloplastic materials in conjunction with soft tissue procedure to repair and restore the facial bones to form and function. This does not include obtaining the graft and these procedures may require multiple surgical approaches. This procedure does not include edentulous maxilla and mandibular reconstruction for prosthetic considerations. See code D7950.	Not a benefit of the plan	
D7960 ▲	Frenulectomy (frenectomy or frenotomy) – separate procedure The frenum may be excised when the tongue has limited mobility; for large diastemas between teeth; or when the frenum interferes with a prosthetic appliance; or when it is the etiology of periodontal tissue disease.	- Narrative should include diagnosis. - Frenulectomy is disallowed when performed on the same day as any periodontal or surgical procedure by the same dentist/dental office. - This service may be processed under patient's medical benefits.	Narrative
D7963 ▲	Frenuloplasty Excision of the frenum with accompanying excision or repositioning of aberrant muscle and z-plasty or other local flap closure.	- Narrative should include diagnosis. - Frenuloplasty is disallowed when billed in conjunction with another surgical or periodontal procedure(s) in the same surgical site, by the same dentist/ dental office. -This service may be processed under patient's medical benefits. Valid Arch/Tooth #: UA, LA, 6-11, 22-27	Narrative
D7970 ▲	Excision of hyperplastic tissue – per arch	- The benefit for excision of hyperplastic tissue is disallowed when billed in conjunction with other surgical procedure(s) in the same surgical area by the same dentist/dental office - Limited to edentulous areas. Valid Arch: UA, LA	Narrative
D7971 ▲	Excision pericoronal gingiva Surgical removal of inflammatory or hypertrophied tissues surrounding partially erupted/impacted teeth.	- The benefit for excision of pericoronal gingiva is disallowed when billed in conjunction with other surgical procedure(s) in the same surgical area by the same dentist/dental office. - This applies to excision distal of 2nd or 3rd molars. Valid Tooth #: 1, 2, 15, 16, 17, 18, 31, 32	Narrative

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7972 ▲	Surgical reduction of fibrous tuberosity	- The benefit for surgical reduction of fibrous tuberosity is disallowed when billed in conjunction with other surgical procedure(s) in the same surgical area by the same dentist/dental office. - This service may be processed under patient's medical benefits. Valid Quad/Arch: UA, UR, UL	Medical Carrier Statement, Operative Report
D7979	Non-surgical Sialolithotomy A sialolith is removed from the gland or ductal portion of the gland without surgical incision into the gland or the duct of the gland; for example via manual manipulation, ductal dilation, or any other non-surgical method.	Not a benefit of the plan	
D7980 ▲	Sialolithotomy Surgical procedure by which a stone within a salivary gland or its duct is removed either intraorally or extraorally.	This service may be processed under patient's medical benefits. Valid Quad/Arch: LA, LL, LR	Medical Carrier Statement, Operative Report
D7981	Excision of salivary gland, by report	Not a benefit of the plan	
D7982	Sialodochoplasty Surgical procedure for the repair of a defect and/or restoration of a portion of a salivary gland duct.	Not a benefit of the plan	
D7983 ▲	Closure of salivary fistula Surgical closure of an opening between a salivary duct and/or gland and the cutaneous surface or an opening into the oral cavity through other than the normal anatomic pathway.	This service may be processed under patient's medical benefits.	Medical Carrier Statement, Operative Report
D7990	Emergency tracheotomy Surgical formation of a tracheal opening usually below the cricoid cartilage to allow for respiratory exchange.	Not a benefit of the plan	
D7991	Coronoidectomy Surgical removal of the coronoid process of the mandible.	Not a benefit of the plan	
D7995	Synthetic graft – mandible or facial bones by report Includes allogenic material.	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D7996	Implant – mandible for augmentation purposes (excluding alveolar ridge), by report	Not a benefit of the plan	
D7997	Appliance removal (not by dentist who placed appliance), includes removal of archbar	Not a benefit of the plan	
D7998	Intraoral placement of a fixation device not in conjunction with a fracture The placement of intermaxillary fixation appliance for documented medically accepted treatments not in association with fractures.	Not a benefit of the plan	
D7999 ▲	Unspecified oral surgery procedure, by report Used for procedure that is not adequately described by a code. Describe procedure.	- Documentation should include materials used, tooth number, arch, quadrant, or area of the mouth, chair time, X-rays or any other supporting information. - Upon review of documentation, the appropriate benefit allowance will be applied.	Operative Report

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

Orthodontics

Primary Dentition: Teeth developed and erupted first in order of time.

Transitional Dentition: The final phase of the transition from primary to adult teeth, in which the deciduous molars and canines are in the process of shedding and the permanent successors are emerging.

Adolescent Dentition: The dentition that is present after the normal loss of primary teeth and prior to cessation of growth that would affect orthodontic treatment.

Adult Dentition: The dentition that is present after the cessation of growth that would affect orthodontic treatment. All of these codes may be used more than once for the treatment of a particular patient depending on the particular circumstance. A patient may require more than one interceptive procedure or more than one limited procedure depending on their particular problem.

General Guidelines

Orthodontic services are not benefits of all HMAA Plans. Please refer to current group benefit information for specific coverage.

Allowances include all appliances, adjustments, insertion and removal (and associated office visits). HMAA Plans do not provide for repair or replacement of any appliance. All cases assume time frame for active course of treatment, and includes the cost of any post-treatment retention.

- Services that are related to orthodontic treatment are benefits of a patient's diagnostic or basic coverage, whether or not the plan provides orthodontic coverage. Such procedures may include routine X-rays and extractions.
- Services listed with the description of "Coverage limited to members who have Orthodontic Plan Benefits" are only covered under those plans that have Orthodontic coverage and are payable as part of the diagnostic or basic benefits.

The HMAA orthodontic plans allow one retainer per arch per lifetime. Retainer adjustments are included in the fee for "Comprehensive Orthodontic Treatment" and are disallowed if performed by the same dentist/dental office, denied if performed by a different dentist/dental office.

Payments are scheduled according to the plan's contractual agreement and the payment schedule is designated in the current Group Schedule of Benefits.

A Comprehensive Orthodontic treatment is a benefit once per lifetime.

For two phase treatment plans, submit a narrative for each phase. Phase I may be a benefit as Limited or Interceptive treatment instead of Comprehensive. Phase II will be a benefit as Comprehensive treatment.

Separate laboratory fees for clear aligners, such as Invisalign, are considered cosmetic and chargeable to the patient; on claim the form use a separate line for the clear aligner dental laboratory charges as procedure code D8999 and include a narrative stating "clear aligner". Maintain a patient consent form on file.

When a service is elected by the patient for cosmetic reasons, the dentist must explain to the patient that it is not a covered benefit and the dental insurance will not pay for the services. HMAA recommends the dental office to obtain the patient's written consent, prior to rendering the service on a form that clearly discloses to the patient the financial charge that will be incurred for cosmetic services.

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ▣ Orthodontic ★ Refer to DC/DOC

Limited Orthodontic Treatment

Orthodontic treatment with a limited objective, not involving the entire dentition. It may be directed at the only existing problem or at only one aspect of a larger problem in which a decision is made to defer or forego more comprehensive therapy. Examples of this type of treatment would be treatment in one arch only to correct crowding, partial treatment to open spaces or upright a tooth for a bridge or implant and partial treatment for closure of space(s.)

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D8010	Limited orthodontic treatment of the primary dentition	Not a benefit of the plan	
D8020	Limited orthodontic treatment of the transitional dentition	Not a benefit of the plan	
D8030	Limited orthodontic treatment of the adolescent dentition	Not a benefit of the plan	
D8040 ☐	Limited orthodontic treatment of the adult dentition	Not a benefit of the plan	

Interceptive Orthodontic Treatment

Treatment using codes for interceptive orthodontic treatment are for procedures to lessen the severity or future effects of a malformation and to eliminate its cause.

An extension of preventive orthodontics that may include localized tooth movement. Such treatment may occur in the primary or transitional dentition and may include such procedures as the redirection of ectopically erupting teeth, correction of isolated dental crossbite or recovery of recent minor space loss where overall space is adequate.

The key to successful interception is intervention in the incipient stages of a developing problem to lessen the severity of the malformation and eliminate its cause. Complicating factors such as skeletal disharmonies, overall space deficiency, or other conditions may require future comprehensive therapy.

Early phases of comprehensive therapy may utilize some procedures that might also be used interceptively, but such procedures are not considered interceptive in those applications.

D8050	Interceptive orthodontic treatment of the primary dentition	Not a benefit of the plan	
D8060 ☐	Interceptive orthodontic treatment of the transitional dentition	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ☐ Orthodontic ★ Refer to DC/DOC

Comprehensive Orthodontic Treatment

These codes should be used when there are multiple phases of treatment provided at different stages of dentofacial development.

For example, the use of an activator is generally stage one of a two-stage treatment. In this situation, placement of fixed appliances will generally be stage two of a two-stage treatment. Both phases should be listed as comprehensive treatment modified by the appropriate stage of dental development.

This is used to report the coordinated diagnosis and treatment leading to the improvement of a patient's craniofacial dysfunction and/or dentofacial deformity including anatomical, functional and aesthetic relationships. Treatment usually, but not necessarily, utilizes fixed orthodontic appliances. Adjunctive procedures, such as extractions, maxillofacial surgery, nasopharyngeal surgery, myofunctional or speech therapy and restorative or periodontal care, may be coordinated disciplines. Optimal care requires long-term consideration of patient's needs and periodic re-evaluation. Treatment may incorporate several phases with specific objectives at various stages of dental facial development.

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D8070 ■	Comprehensive orthodontic treatment of the transitional dentition	- Narrative should include class of malocclusion (Class I, II, III); extent of crowding, overbite, spacing, rotation, arch discrepancy; extraction/expansion; fixed/removable appliance and duration of treatment. - Due to the contract limitation of one Comprehensive treatment per lifetime, for two phase treatment plans, submit narrative for each phase. Phase I may be beneficial as Limited or Interceptive treatment, instead of Comprehensive. Phase II will be a benefit as Comprehensive treatment.	Narrative
D8080 ■	Comprehensive orthodontic treatment of the adolescent dentition	Not a benefit of the plan	
D8090 ■	Comprehensive orthodontic treatment of the adult dentition	Not a benefit of the plan	
D8210 ■	Removable appliance Removable indicates patient can remove; includes appliances for thumb sucking and tongue thrusting.	Limited to one appliance per arch	
D8220 ■	Fixed appliance therapy Fixed indicates patient cannot remove appliance; includes appliances for thumb sucking and tongue thrusting.	Limited to one appliance per arch	
D8660 ■	Pre-orthodontic treatment visit	Not a benefit of the plan	
D8670 ■	Periodic orthodontic treatment visit (as part of contract)	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.

● Basic ■ Preventive ▲ Restorative ◆ Major ■ Orthodontic ★ Refer to DC/DOC

CDT Code	CDT Definition	Benefit Guidelines	Submission Requirements
D8680 ■	Orthodontic retention (removal of appliances, construction and placement of retainer(s))	<ul style="list-style-type: none"> - Limited to the removal of appliances. - Upon review, the appropriate benefit allowance will be applied. - This procedure is disallowed unless performed by a dentist other than the original dentist/dental office. 	Narrative
D8690 ■	Orthodontic treatment (alternative billing to a contract fee) Services provided by dentist other than original treating dentist. A method of payment between the provider and responsible party for services that reflect an open-ended fee arrangement.	Not a benefit of the plan	
D8691 ■	Repair of orthodontic appliance Does not include bracket and standard fixed orthodontic appliances. It does include functional appliances and palatal expanders.	Not a benefit of the plan	
D8692 ■	Replacement of lost or broken retainer	Limited to one replacement.	
D8693 ■	Rebonding or recementing, and/or repair, as required, of fixed retainers	<ul style="list-style-type: none"> - This procedure is included in the Ortho Case Fee. - A separate fee is disallowed to the same dentist. - In the case where a different dentist is repairing/recementing/rebonding the fixed retainer, a separate benefit may be given once in a lifetime; then it becomes the patient responsibility due to lack of compliance. 	
D8695	Removal of fixed orthodontic appliance for reasons other than completion of treatment	Not a benefit of the plan	

This document is intended to be a guideline only. Please refer to Dental Certificate (DC) or Description of Coverage (DOC) for details.
